Preface

Since 1952, Krause Publications has built its business and reputation by serving the needs of coin collectors. Three questions dominate every collector's thinking.

The first is: "What is it?" We hope the photographs in this price guide will help you identify the coins you own.

The second question is: "What's it worth?" The prices contained in this volume are intended to serve as a retail guide. That means if you want to buy a specific coin in a specific grade, the price listed will be approximately what you would have to pay at the time this book was compiled. The prices listed are neither an offer to buy nor an offer to sell the coins listed. They are simply a guide assembled for your convenience by the authors. Remember that prices fluctuate. What dealers will pay to buy coins from you is a question beyond the scope of this book.

The third question is: "How do I buy a specific coin?" There are several thousand coin dealers across America who are ready, willing and able to serve your needs. To find them, you can consult the phone book in your local area, but beyond that, there is a whole hobby world out there and newspapers and magazines that feature advertisements by dealers who want to fill your needs. For more information on numismatic products and pricing go to www.numismaster.com.

Introduction

The authors have organized this book in a manner that we hope you will find both logical and useful.

Value listings

Values listed in the price guide are average retail prices. These are the approximate prices collectors can expect to pay when purchasing coins from dealers. They are not offers to buy or sell. The pricing section should be considered a guide only; actual selling prices will vary.

The values were compiled by Krause Publications' independent staff of market analysts. They derived the values listed by monitoring auction results, business on electronic dealer trading networks and at major shows, and in consultation with a panel of dealers. For rare coins, when only a few specimens of a particular date and mintmark are known, a confirmed transaction may occur only once every several years. In those instances, the most recent auction result is listed.

Grading

Values are listed for coins in various states of preservation, or grades. Standards used in determining grade for U.S. coins are those set by the American Numismatic Association (www.money.org). See Chapter 3 for more on grading.

Precious metal content

Throughout this book precious metal content is indicated in troy ounces. One troy ounce equals 480 grains, or 31.103 grams. This is followed by ASW or AGW, which stand for Actual Silver (Gold) Weight.

Dates and mintmarks

The dates listed are the individual dates that appear on each coin. The letter that follows the date is the mintmark and indicates where the coin was struck: "C" – Charlotte, N.C. (1838-1861); "CC" – Carson City, Nev. (1870-1893); "D" – Dahlonega, Ga. (1838-1861), and Denver (1906-present); "O" – New Orleans (1838-1909); "P" – Philadelphia (1793-present), coins without mintmarks also were struck at Philadelphia; "S" – San Francisco (1854-present); and "W" – West Point, N.Y. (1984-present).

A slash mark in a date indicates an overdate. This means a new date was engraved on a die over an old date. For example, if the date is listed as "1899/8," an 1898 die had a 9 engraved over the last 8 in the date. Portions of the old numeral are still visible on the coin.

A slash mark in a mintmark listing indicates an overmintmark (example: "1922-P/D"). The same process as above occurred, but this time a new mintmark was engraved over an old.

See Chapter 3, "U.S. Minting Varieties and Errors," for more information on overdates and overmintmarks.

1 Type Identification Guide

United States coins are often given nicknames based on their obverse design. This Type Identification Guide is a start for coin identification. It also shows the changes in the sizes of various denominations over time.

2 How to Grade

Better condition equals better value

Grading is one of the most important factors in buying and selling coins as collectibles. Unfortunately, it's also one of the most controversial. Since the early days of coin collecting in the United States, buying through the mail has been a convenient way for collectors to acquire coins. As a result, there has always been a need in numismatics for a concise way to classify the amount of wear on a coin and its condition in general.

A look back

In September 1888, Dr. George Heath, a physician in Monroe, Mich., published a four-page pamphlet titled *The American Numismatist*. Publication of subsequent issues led to the founding of the American Numismatic Association, and *The Numismatist*, as it's known today, is the association's official journal. Heath's first issues were largely devoted to selling world coins from his collection. There were no formal grades listed with the coins and their prices, but the following statement by Heath indicates that condition was a consideration for early collectors:

"The coins are in above average condition," Heath wrote, "and so confident am I that they will give satisfaction, that I agree to refund the money in any unsatisfactory sales on the return of the coins."

As coin collecting became more popular and *The Numismatist* started accepting paid advertising from others, grading became more formal. The February 1892 issue listed seven "classes" for the condition of coins (from worst to best): mutilated, poor, fair, good, fine, uncirculated, and proof. Through the years, the hobby has struggled with developing a grading system that would be accepted by all and could apply to all coins. The hobby's growth was accompanied by a desire for more grades, or classifications, to more precisely define a coin's condition. The desire for more precision, however, was at odds with the basic concept of grading: to provide a concise method for classifying a coin's condition.

For example, even the conservatively few classifications of 1892 included fudge factors.

"To give flexibility to this classification," *The Numismatist* said, "such modification of find, good and fair, as 'extremely,' 'very,' 'almost,' etc., are used to express slight varia-

tions from the general condition."

The debate over grading continued for decades in *The Numismatist*. A number of articles and letters prodded the ANA to write grading guidelines and endorse them as the association's official standards. Some submitted specific suggestions for terminology and accompanying standards for each grade. But grading remained a process of "instinct" gained through years of collecting or dealing experience.

A formal grading guide in book form finally appeared in 1958, but it was the work of two individuals rather than the ANA. *A Guide to the Grading of United States Coins* by Martin R. Brown and John W. Dunn was a break-through in the great grading debate. Now collectors had a reference that gave them specific guidelines for specific coins and could be studied and restudied at home.

The first editions of Brown and Dunn carried text only, no illustrations. For the fourth edition, in 1964, publication was assumed by Whitman Publishing Co. of Racine, Wis., and line drawings were added to illustrate the text.

The fourth edition listed six principal categories for circulated coins (from worst to best): good, very good, fine, very fine, extremely fine, and about uncirculated. But again, the desire for more precise categories was evidenced. In the book's introduction, Brown and Dunn wrote, "Dealers will sometimes advertise coins that are graded G-VG, VG-F, F-VF, VF-XF. Or the description may be ABT. G. or VG plus, etc. This means that the coin in question more than meets minimum standards for the lower grade but is not quite good enough for the higher grade."

When the fifth edition appeared, in 1969, the "New B & D Grading System" was introduced. The six principal categories for circulated coins were still intact, but variances within those categories were now designated by up to four letters: "A," "B," "C" or "D." For example, an EF-A coin was "almost about uncirculated." An EF-B was "normal extra fine" within the B & D standards. EF-C had a "normal extra fine" obverse, but the reverse was "obviously not as nice as obverse due to poor strike or excessive wear." EF-D had a "normal extra fine" reverse but a problem obverse.

But that wasn't the end. Brown and Dunn further listed 29 problem points that could appear on a coin – from No. 1 for an "edge bump" to No. 29 for "attempted re-engraving outside of the Mint." The number could be followed by the letter "O" or "R" to designate whether the problem appeared on the obverse or reverse and a Roman numeral corresponding to a clock face to designate where the problem appears on the obverse or reverse. For example, a coin described as "VG-B-9-O-X" would grade "VG-B"; the "9" designated a "single rim nick"; the "O" indicated the nick was on the obverse; and the "X" indicated it appeared at the 10 o'clock position, or upper left, of the obverse.

The authors' goal was noble – to create the perfect grading system. They again, however, fell victim to the age-old grading-system problem: Precision comes at the expense of brevity. Dealer Kurt Krueger wrote in the January 1976 issues of *The Numismatist*, "Under the new B & D system, the numismatist must contend with a minimum of 43,152 different grading combinations! Accuracy is apparent, but simplicity has been lost." As a result, the "New B & D Grading System" never caught on in the marketplace.

The 1970s saw two important grading guides make their debut. The first was *Photograde* by James F. Ruddy. As the title implies, Ruddy uses photographs instead of line drawings to show how coins look in the various circulated grades. Simplicity is also a virtue of Ruddy's book. Only seven circulated grades are listed (about good, good, very good, fine, very fine, extremely fine, and about uncirculated), and the designations stop there.

In 1977 the longtime call for the ANA to issue grading standards was met with the release of *Official A.N.A. Grading Standards for United States Coins*. Like Brown and Dunn, the first edition of the ANA guide used line drawings to illustrate coins in various states of wear. But instead of using adjectival descriptions, the ANA guide adopted a numerical system for designating grades.

The numerical designations were based on a system used by Dr. William H. Sheldon in his book *Early American Cents*, first published in 1949. He used a scale of 1 to 70 to designate the grades of large cents.

"On this scale," Sheldon wrote, "1 means that the coin is identifiable and not mutilated – no more than that. A 70-coin is one in flawless Mint State, exactly as it left the dies, with perfect mint color and without a blemish or nick."

(Sheldon's scale also had its pragmatic side. At the time, a No. 2 large cent was worth about twice a No. 1 coin; a No. 4 was worth about twice a No. 2, and so on up the scale.)

With the first edition of its grading guide, the ANA adopted the 70-point scale for grading all U.S. coins. It designated 10 categories of circulated grades: AG-3, G-4, VG-8, F-12, VF-20, VF-30, EF-40, EF-45, AU-50, and AU-55. The third edition, released in 1987, replaced the line drawings with photographs, and another circulated grade was added: AU-58. A fourth edition was released in 1991.

Grading circulated U.S. coins

Dealers today generally use either the ANA guide or *Photograde* when grading circulated coins for their inventories. (Brown and Dunn is now out of print.) Many local coin shops sell both books. Advertisers in *Numismatic News*, *Coins* magazine, and *Coin Prices* must indicate which standards they are using in grading their coins. If the standards are not listed, they must conform to ANA standards.

Following are some general guidelines, accompanied by photos, for grading circulated U.S. coins. Grading even circulated pieces can be subjective, particularly when attempting to draw the fine line between, for example, AU-55 and AU-58. Two longtime collectors or dealers can disagree in such a case.

But by studying some combination of the following guidelines, the ANA guide, and *Photograde*, and by looking at a lot of coins at shops and shows, collectors can gain enough grading knowledge to buy circulated coins confidently from dealers and other collectors. The more you study, the more knowledge and confidence you will gain. When you decide which series of coins you want to collect, focus on the guidelines for that particular series. Read them, reread them, and then refer back to them again and again.

AU-50

AU-50 (about uncirculated): Just a slight trace of wear, result of brief exposure to circulation or light rubbing from mishandling, may be evident on elevated design areas. These imperfections may appear as scratches or dull spots, along with bag marks or edge nicks. At least half of the original mint luster generally is still evident.

Indian cent

Lincoln cent

Washington quarter

Walking Liberty half dollar

Morgan dollar

Barber coins

XF-40

XF-40 (extremely fine): The coin must show only slight evidence of wear on the highest points of the design, particularly in the hair lines of the portrait on the obverse. The same may be said for the eagle's feathers and wreath leaves on the reverse of most U.S. coins. A trace of mint luster may still show in protected areas of the coin's surface.

Indian cent

Walking Liberty half dollar

Morgan dollar

Barber coins

VF-20

VF-20 (very fine): The coin will show light wear at the fine points in the design, though they may remain sharp overall. Although the details may be slightly smoothed, all lettering and major features must remain sharp.

Indian cent: All letters in “Liberty” are complete but worn. Headdress shows considerable flatness, with flat spots on the tips of the feathers.

Lincoln cent: Hair, cheek, jaw, and bow-tie details will be worn but clearly separated, and wheat stalks on the reverse will be full with no weak spots.

Buffalo nickel: High spots on hair braid and cheek will be flat but show some detail, and a full horn will remain on the buffalo.

Jefferson nickel: Well over half of the major hair detail will remain, and the pillars on Monticello will remain well defined, with the triangular roof partially visible.

Mercury dime: Hair braid will show some detail, and three-quarters of the detail will remain in the feathers. The two diagonal bands on the fasces will show completely but will be worn smooth at the middle, with the vertical lines sharp.

Standing Liberty quarter: Rounded contour of Liberty’s right leg will be flattened, as will the high point of the shield.

Washington quarter: There will be considerable wear on the hair curls, with feathers on the right and left of the eagle’s breast showing clearly.

Indian cent

Lincoln cent

Buffalo nickel

Jefferson nickel

VF-20

Walking Liberty half dollar: All lines of the skirt will show but will be worn on the high points. Over half the feathers on the eagle will show.

Morgan dollar: Two-thirds of the hair lines from the forehead to the ear must show. Ear should be well defined. Feathers on the eagle's breast may be worn smooth.

Barber coins: All seven letters of "Liberty" on the headband must stand out sharply. Head wreath will be well outlined from top to bottom.

Mercury dime

Standing Liberty quarter

Washington quarter

Walking Liberty half dollar

Morgan dollar

Barber coins

F-12

F-12 (fine): Coins show evidence of moderate to considerable but generally even wear on all high points, though all elements of the design and lettering remain bold. Where the word “Liberty” appears in a headband, it must be fully visible. On 20th century coins, the rim must be fully raised and sharp.

Indian cent

Grading uncirculated U.S. coins

The subjectivity of grading and the trend toward more classifications becomes more acute when venturing into uncirculated, or mint-state, coins. A minute difference between one or two grade points can mean a difference in value of hundreds or even thousands of dollars. In addition, the standards are more difficult to articulate in writing and illustrate through drawings or photographs. Thus, the possibilities for differences of opinion on one or two grade points increase in uncirculated coins.

Back in Dr. George Heath's day and continuing through the 1960s, a coin was either uncirculated or it wasn't. Little distinction was made between uncirculated coins of varying condition, largely because there was little if any difference in value. When *Numismatic News* introduced its value guide in 1962 (the forerunner of today's Coin Market section in the *News*), it listed only one grade of uncirculated for Morgan dollars.

But as collectible coins increased in value and buyers of uncirculated coins became more picky, distinctions within uncirculated grade started to surface. In 1975 *Numismatic News* still listed only one uncirculated grade in Coin Market, but added this note: "Uncirculated and proof specimens in especially choice condition will also command proportionately higher premiums than these listed."

The first edition of the ANA guide listed two grades of uncirculated, MS-60 and MS-65, in addition to the theoretical but non-existent MS-70 (a flawless coin). MS-60 was described as "typical uncirculated" and MS-65 as "choice uncirculated." *Numismatic News* adopted both designations for Coin Market. In 1981, when the second edition of the ANA grading guide was released, MS-67 and MS-63 were added. In 1985 *Numismatic News* started listing six grades of uncirculated for Morgan dollars: MS-60, MS-63, MS-65, MS-65+, and MS-63 prooflike.

Then in 1986, a new entity appeared that has changed the nature of grading and trading uncirculated coins ever since. A group of dealers led by David Hall of Newport Beach, Calif., formed the Professional Coin Grading Service. For a fee, collectors could submit a coin through an authorized PCGS dealer and receive back a professional opinion of its grade.

Collectors have a variety of grading services to choose from. This set of Arkansas half dollars that appeared in an Early American History Auctions sale used two of the services.

The concept was not new; the ANA had operated an authentication service since 1972 and a grading service since 1979. A collector or dealer could submit a coin directly to the service and receive a certificate giving the service's opinion on authenticity and grade. The grading service was the source of near constant debate among dealers and ANA officials. Dealers charged that ANA graders were too young and inexperienced, and that their grading was inconsistent.

Grading stability was a problem throughout the coin business in the early 1980s, not just with the ANA service. Standards among uncirculated grades would tighten during a bear market and loosen during a bull market. As a result, a coin graded MS-65 in a bull market may have commanded only MS-63 during a bear market.

PCGS created several innovations in the grading business in response to these problems:

1. Coins could be submitted through PCGS-authorized dealers only.
2. Each coin would be graded by at least three members of a panel of "top graders," all prominent dealers in the business. (Since then, however, PCGS does not allow its graders to also deal in coins.)
3. After grading, the coin would be encapsulated in an inert, hard-plastic holder with a serial number and the grade indicated on the holder.
4. PCGS-member dealers pledged to make a market in PCGS-graded coins and honor the grades assigned.
5. In one of the most far-reaching moves, PCGS said it would use all 11 increments of uncirculated on the 70-point numerical scale: MS-60, MS-61, MS-62, MS-63, MS-64, MS-65, MS-66, MS-67, MS-68, MS-69, and MS-70.

Numerous other commercial grading services followed in the steps of PCGS and third-party grading is an accepted part of the hobby.

How should a collector approach the buying and grading of uncirculated coins? Collecting uncirculated coins worth thousands of dollars implies a higher level of numismatic expertise by the buyer. Those buyers without that level of expertise should cut their teeth on more inexpensive coins, just as today's experienced collectors did. Inexperienced collectors can start toward that level by studying the guidelines for mint-state coins in the ANA grading guide and looking at lots of coins at shows and shops.

Study the condition and eye appeal of a coin and compare it to other coins of the same series. Then compare prices. Do the more expensive coins look better? If so, why? Start to make your own judgments concerning relationships between condition and value. Experience remains the best teacher in the field of grading.

Grading U.S. proof coins

Because proof coins are struck by a special process using polished blanks, they receive their own grading designation. A coin does not start out being a proof and then become mint state if it becomes worn. Once a proof coin, always a proof coin.

In the ANA system, proof grades use the same numbers as circulated and uncirculated grades, and the amount of wear on the coin corresponds to those grades. But the number is preceded by the word "proof." For example, Proof-65, Proof-55, Proof-45, and so on. In addition, the ANA says a proof coin with many marks, scratches or other defects should be called an "impaired proof."

3 U.S. Minting Varieties and Errors

Most are common, some are rare

Introduction

The P.D.S. cataloging system used here to list minting varieties was originally compiled by Alan Herbert in 1971. PDS stands for the three main divisions of the minting process, “planchet,” “die” and “striking.” Two more divisions cover collectible modifications after the strike, as well as non-collectible alterations, counterfeits and damaged coins.

This listing includes 445 classes, each a distinct part of the minting process or from a specific non-mint change in the coin. Classes from like causes are grouped together. The PDS system applies to coins of the world, but is based on U.S. coinage with added classes for certain foreign minting practices.

Price ranges are based on a U.S. coin in MS-60 grade (uncirculated.) The ranges may be applied in general to foreign coins of similar size or value although collector values are not usually as high as for U.S. coins. Prices are only a guide as the ultimate price is determined by a willing buyer and seller.

To define minting varieties, “A coin which exhibits a variation of any kind from the normal, as a result of any portion of the minting process, whether at the planchet stage, as a result of a change or modification of the die, or during the striking process. It includes those classes considered to be intentional changes, as well as those caused by normal wear and tear on the dies or other minting equipment and classes deemed to be “errors.”

One of the most unusual error coins – a Roosevelt dime struck on a nail – sold for more than \$42,000 through Heritage Auctions in early 2016. A zinc-coated sixpenny nail found its way into the coinage production line during the minting of Roosevelt dimes, and apparently escaped through normal distribution channels.

The three causes are represented as follows:

1. (I) = Intentional Changes
2. (W) = Wear and Tear
3. (E) = Errors

Note: A class may show more than one cause and could be listed as (IWE).

Rarity level

The rarity ratings are based on the following scale:

- 1 - Very Common. Ranges from every coin struck down to 1,000,000.
- 2 - Common. From 1,000,000 down to 100,000.
- 3 - Scarce. From 100,000 down to 10,000.
- 4 - Very Scarce. From 10,000 down to 1,000.
- 5 - Rare. From 1,000 down to 100.
- 6 - Very Rare. From 100 down to 10.
- 7 - Extremely Rare. From 10 down to 1.

Unknown: If there is no confirmed report of a piece fitting a particular class, it is listed as Unknown. Reports of finds by readers would be appreciated in order to update future presentations.

An Unknown does not mean that your piece automatically is very valuable. Even a Rarity 7 piece, extremely rare, even unique, may have a very low collector value because of a lack of demand or interest in that particular class.

Classes, definitions and price ranges are based on material previously offered in Alan Herbert's book, *The Official Price Guide to Minting Varieties and Errors* and in *Coin Prices Magazine*.

Pricing information has also been provided by John A. Wexler and Ken Potter, with special pricing and technical advice from Del Romines.

Also recommended is the *Cherrypicker's Guide to Rare Die Varieties* by Bill Fivaz and J.T. Stanton. Check your favorite coin shop, numismatic library or book seller for availability of the latest edition.

Quick check index

If you have a coin and are not sure where to look for the possible variety:

If your coin shows doubling, first check V-B-I.

Then try II-A, II-B, II-C, II-I (4 & 5), III-J, III-L, or IV-C.

If part of the coin is missing, check III-B, III-C, or III-D.

If there is a raised line of coin metal, check II-D, II-G.

If there is a raised area of coin metal, check II-E, II-F, or III-F.

If the coin is out of round, and too thin, check III-G.

If coin appears to be the wrong metal, check III-A, III-E, III-F-3 and III-G.

If the die appears to have been damaged, check II-E, II-G. (Damage to the coin itself usually is not a minting variety.)

If the coin shows incomplete or missing design, check II-A, II-E, III-B-3, III-B-5 or III-D.

If only part of the planchet was struck, check III-M.

If something was struck into the coin, check III-J and III-K.

If something has happened to the edge of the coin, check II-D-6, II-E-10, III-I, III-M and III-O.

If your coin shows other than the normal design, check II-A or II-C.

If a layer of the coin metal is missing, or a clad layer is missing, check III-B and III-D.

If you have an unstruck blank, or planchet, check I-G.

If your coin may be a restrike, check IV-C.

If your coin has a counterstamp, countermark, additional engraving or apparent official modifications, check IV-B and V-A-8.

Do not depend on the naked eye to examine your coins. Use a magnifying lens whenever possible, as circulation damage, wear and alterations frequently can be mistaken for legitimate minting varieties.

The planchet varieties

DIVISION I

The first division of the PDS System includes those minting varieties that occur in the manufacture of the planchet upon which the coins will ultimately be struck and includes classes resulting from faulty metallurgy, mechanical damage, faulty processing, or equipment or human malfunction prior to the actual coin striking.

● PLANCHET ALLOY MIX (I-A)

This section includes those classes pertaining to mixing and processing the various metals which will be used to make a coin alloy.

I-A-1 Improper Alloy Mix (WE), Rarity Level: 3-4, Values: \$5 to \$10.

I-A-2 Slag Inclusion Planchet (WE), Rarity Level: 5-6, Values: \$25 up.

● DAMAGED AND DEFECTIVE PLANCHETS (I-B)

To be a class in this section the blank, or planchet, must for some reason not meet the normal standards or must have been damaged in processing. The classes cover the areas of defects in the melting, rolling, punching and processing of the planchets up to the point where they are sent to the coin presses to be struck.

I-B-1 Defective Planchet (WE), Rarity Level: 6, Values: \$25 up.

I-B-2 Mechanically Damaged Planchet (WE), Rarity Level: -, Values: No Value. (See values for the coin struck on a mechanically damaged planchet.)

I-B-3 Rolled Thin Planchet (WE), Rarity Level: 6 - (Less rare on half cents of 1795, 1797 and restrikes of 1831-52.) Values: \$10 up.

I-B-4 Rolled Thick Planchet (WE), Rarity Level: 7 - (Less rare in Colonial copper coins. Notable examples occur on the restrike half cents of 1840-52.) Values: \$125 up.

I-B-5 Tapered Planchet (WE), Rarity Level: 7, Values: \$25 up.

I-B-6 Partially Unplated Planchet (WE), Rarity Level: 6, Values: \$15 up.

I-B-7 Unplated Planchet (WE), Rarity Level: 6-7, Values: \$50 up.

I-B-8 Bubbled Plating Planchet (WE), Rarity Level: 1, Values: No Value.

I-B-9 Included Gas Bubble Planchet (WE), Rarity Level: 6-7, Values: \$50 up.

I-B-10 Partially Unclad Planchet (WE), Rarity Level: 6, Values: \$20 up.

I-B-11 Unclad Planchet (WE), Rarity Level: 6-7, Values: \$50 up.

I-B-12 Undersize Planchet (WE), Rarity Level: 7, Values: \$250 up.

I-B-13 Oversize Planchet (WE), Rarity Level: 7, Values: \$250 up.

I-B-14 Improperly Prepared Proof Planchet (WE), Rarity Level: 7, Values: \$100 up.

I-B-15 Improperly Annealed Planchet (WE), Rarity Level: -, Values: No Value.

I-B-16 Faulty Upset Edge Planchet (WE), Rarity Level: 5-6, Values: \$10 up.

I-B-17 Rolled-In Metal Planchet (WE), Rarity Level: 6-7, Values: \$50 up.

I-B-18 Weld Area Planchet (WE), Rarity Level: Unknown, Values: No Value Established. (See values for the coins struck on weld area planchets.)

I-B-19 Strike Clip Planchet (WE), Rarity Level: 7, Values: \$150 up.

I-B-20 Unpunched Center-Hole Planchet (WE), Rarity Level: 5-7, Values: \$5 and up.

I-B-21 Incompletely Punched Center-Hole Planchet (WE), Rarity Level: 6-7, Values: \$15 up.

I-B-22 Uncentered Center-Hole Planchet (WE), Rarity Level: 6-7, Values: \$10 up.

I-B-23 Multiple Punched Center-Hole Planchet (WE), Rarity Level: 7, Values: \$35 up.

I-B-24 Unintended Center-Hole Planchet (WE), Rarity Level: Unknown, Values: -.

I-B-25 Wrong Size or Shape Center-Hole Planchet (IWE), Rarity Level: 5-7, Values: \$10 up.

● CLIPPED PLANCHETS (I-C)

Clipped blanks, or planchets, occur when the strip of coin metal fails to move forward between successive strokes of the gang punch to clear the previously punched holes, in the same manner as a cookie cutter overlapping a previously cut hole in the dough. The size of the clip is a function of the amount of overlap of the next punch.

The overlapping round punches produce a missing arc with curve matching the outside circumference of the blanking punch. Straight clips occur when the punch overlaps the beginning or end of a strip which has had the end sheared or sawed off. Ragged clips occur in the same manner when the ends of the strip have been left as they were rolled out.

The term "clip" as used here should not be confused with the practice of clipping or shaving small pieces of metal from a bullion coin after it is in circulation.

- I-C-1 Disc Clip Planchet (WE), Rarity Level: 3-5, Values: \$5 up.
- I-C-2 Curved Clip Planchet - (To 5%) (WE), Rarity Level: 5-6, Values: \$5 up.
- I-C-3 Curved Clip Planchet - (6 to 10%) (WE), Rarity Level: 6, Values: \$10 up.
- I-C-4 Curved Clip Planchet - (11 to 25%) (WE), Rarity Level: 5-6, Values: \$15 up.
- I-C-5 Curved Clip Planchet - (26 to 60%) (WE), Rarity Level: 6-7, Values: \$25 up.
- I-C-6 Double Curved Clip Planchet (WE), Rarity Level: 6, Values: \$10 up.
- I-C-7 Triple Curved Clip Planchet (WE), Rarity Level: 5-6, Values: \$25 up.
- I-C-8 Multiple Curved Clip Planchet (WE), Rarity Level: 6-7, Values: \$35 up.
- I-C-9 Overlapping Curved Clipped Planchet (WE), Rarity Level: 6-7, Values: \$50 up.
- I-C-10 Incompletely Punched Curved Clip Planchet (WE), Rarity Level: 6, Values: \$35 up.
- I-C-11 Oval Curved Clip Planchet (WE), Rarity Level: 6-7, Values: \$50 up.
- I-C-12 Crescent Clip Planchet - (61% or more) (WE), Rarity Level: 7, Values: \$200 up.
- I-C-13 Straight Clip Planchet (WE), Rarity Level: 6, Values: \$30 up.
- I-C-14 Incompletely Sheared Straight Clip Planchet (WE), Rarity Level: 6, Values: \$50 up.
- I-C-15 Ragged Clip Planchet (WE), Rarity Level: 6-7, Values: \$35 up.
- I-C-16 Outside Corner Clip Planchet (E), Rarity Level: -, Values: No Value.
- I-C-17 Inside Corner Clip Planchet (E), Rarity Level: -, Values: No Value.
- I-C-18 Irregularly Clipped Planchet (E) Rarity Level: -, Values: Value not established.
- I-C-19 Incompletely Punched Scalloped or Multi-Sided Planchet (E), Rarity Level: 7, Values: \$25 up.

I-C-2

● LAMINATED, SPLIT, OR BROKEN PLANCHET (I-D)

For a variety of reasons the coin metal may split into thin layers (delaminate) and either split completely off the coin, or be retained. Common causes are included gas or alloy mix problems. Lamination cracks usually enter the surface of the planchet at a very shallow angle or are at right angles to the edge. The resulting layers differ from slag in that they appear as normal metal.

Lamination cracks and missing metal of any size below a split planchet are too common in the 35 percent silver 1942-1945 nickels to be collectible or have any significant value.

- I-D-1 Small Lamination Crack Planchet (W), Rarity Level: 4-5, Values: \$1 up.
- I-D-2 Large Lamination Crack Planchet (W), Rarity Level: 3-4, Values: \$5 up.
- I-D-3 Split Planchet (W), Rarity Level: 5-6, Values: \$15 up.
- I-D-4 Hinged Split Planchet (W), Rarity Level: 6-7, Values: \$75 up.
- I-D-5 Clad Planchet With a Clad Layer Missing (W), Rarity Level: 5-6, Values: \$35 up.
- I-D-6 Clad Planchet With Both Clad Layers Missing (W), Rarity Level: 6-7, Values: \$75 up.
- I-D-7 Separated Clad Layer (W), Rarity Level: 5, Values: \$25 up.
- I-D-8 Broken Planchet (WE), Rarity Level: 3-4, Values: \$5 up.

● WRONG STOCK PLANCHET (I-E)

The following classes cover those cases where the wrong coin metal stock was run through the blanking press, making blanks of the correct diameter, but of the wrong thickness, alloy or metal or a combination of the wrong thickness and the wrong metal.

- I-E-1 Half Cent Stock Planchet (IE), Rarity Level: Unknown, Values: No Value Established.
- I-E-2 Cent Stock Planchet (IE), Rarity Level: Unknown, Values: No Value Established.
- I-E-3 Two Cent Stock Planchet (E), Rarity Level: Unknown, Values: No Value Established.
- I-E-4 Three Cent Silver Stock Planchet (E), Rarity Level: Unknown, Values: No Value Established.
- I-E-5 Three Cent Nickel Stock Planchet (E), Rarity Level: Unknown, Values: No Value Established.

- I-E-6 Half Dime Stock Planchet (E), Rarity Level: Unknown, Values: No Value Established.
- I-E-7 Dime Stock Planchet (E), Rarity Level: 7, Values: \$200 up.
- I-E-8 Twenty Cent Stock Planchet (E), Rarity Level: Unknown, Values: No Value Established.
- I-E-9 Quarter Stock Planchet (E), Rarity Level: Unknown, Values: No Value Established.
- I-E-10 Half Dollar Stock Planchet (E), Rarity Level: Unknown, Values: No Value Established.
- I-E-11 Dollar Stock Planchet (E), Rarity Level: 7, Values: \$300 up.
- I-E-12 Token or Medal Stock Planchet (E), Rarity Level: Unknown, Values: No Value Established.
- I-E-13 Wrong Thickness Spoiled Planchet (IWE), Rarity Level: Unknown, Values: No Value Established.
- I-E-14 Correct Thickness Spoiled Planchet (IWE), Rarity Level: Unknown, Values: No Value Established.
- I-E-15 Cut Down Struck Token Planchet (IWE), Rarity Level: Unknown, Values: No Value Established.
- I-E-16 Experimental or Pattern Stock Planchet (IE), Rarity Level: Unknown, Values: No Value Established.
- I-E-17 Proof Stock Planchet (IE), Rarity Level: Unknown, Values: No Value Established.
- I-E-18 Adjusted Specification Stock Planchet (IE), Rarity Level: 7, Values: \$25 up.
- I-E-19 Trial Strike Stock Planchet (IE), Rarity Level: Unknown, Values: No Value Established.
- I-E-20 U.S. Punched Foreign Stock Planchet (E), Rarity Level: 7, Values: \$75 up.
- I-E-21 Punched Foreign Stock Planchet (E), Rarity Level: 7, Values: \$75 up.
- I-E-22 Non-Standard Coin Alloy Planchet (IE), Rarity Level: 7, Values: Unknown.

●EXTRA METAL ON A BLANK, OR PLANCHET (I-F)

True extra metal is only added to the blank during the blanking operation. This occurs as metal is scraped off the sides of the blanks as they are driven down through the thimble, or lower die in the blanking press. The metal is eventually picked up by a blank passing through, welded to it by the heat of friction.

A second form of extra metal has been moved to this section, the sintered coating planchet, the metal deposited on the planchet in the form of dust during the annealing operation.

- I-F-1 Extra Metal on a Type 1 Blank (W), Rarity Level: 7, Values: \$50 up.
- I-F-2 Extra Metal on a Type 2 Planchet (W), Rarity Level: 6-7, Values: \$75 up.
- I-F-3 Sintered Coating Planchet (W), Rarity Level: 7, Values: \$75 up.

●NORMAL OR ABNORMAL PLANCHETS (I-G)

This section consists of the two principal forms – the blank as it comes from the blanking press – and in the form of a planchet after it has passed through the upsetting mill. It also includes a class for purchased planchets and one for planchets produced by the mint.

- I-G-1 Type I Blank (IWE), Rarity Level: 3-5, Values: \$2 up.
- I-G-2 Type II Planchet (IWE), Rarity Level: 3-4, Values: 50 up.
- I-G-3 Purchased Planchet (I), Rarity Level: 1, Values: No Value.
- I-G-4 Mint Made Planchet (I), Rarity Level: 1, Values: No Value.
- I-G-5 Adjustment-Marked Planchet (I), Rarity Level: Unknown, Values: No Value.
- I-G-6 Hardness Test-Marked Planchet (I), Rarity Level: -, Values: No Value Established.

Note: There are no classes between I-G-6 and I-G-23

- I-G-23 Proof Planchet (IE), Rarity Level: 6-7, Values: \$1 up.

●COIN METAL STRIP (I-H)

When the coin metal strip passes through the blanking press it goes directly to a chopper. This cuts the remaining web into small pieces to be sent back to the melting furnace. Pieces of the web or the chopped up web may escape into the hands of collectors.

I-H-1 Punched Coin Metal Strip (IWE), Rarity Level: 4-6, Values: \$5 up, depending on size, denomination and number of holes showing.

I-H-2 Chopped Coin Metal Strip (IE), Rarity Level: 3-5, Values: \$5 up.

The die varieties

DIVISION II

Die varieties may be unique to a given die, but will repeat for the full life of the die unless a further change occurs. Anything that happens to the die will affect the appearance of the struck coin. This includes all the steps of the die making:

- Cutting a die blank from a tool steel bar.
- Making the design.
- Transferring it to a model.
- Transferring it to the master die or hub.
- The hubbing process of making the die.
- Punching in the mintmark.
- Heat treating of the die.

The completed dies are also subject to damage in numerous forms, plus wear and tear during the striking process and repair work done with abrasives. All of these factors can affect how the struck coin looks.

● ENGRAVING VARIETIES (II-A)

In all cases in this section where a master die, or master hub is affected by the class, the class will affect all the working hubs and all working dies descending from it.

Identification as being on a master die or hub depends on it being traced to two or more of the working hubs descended from the same master tools.

II-A-1 Overdate (IE), Rarity Level: 1-7, Values: \$1 up.

II-A-2 Doubled Date (IE), Rarity Level: 1-7, Values: \$1 up.

II-A-3 Small Date (IE), Rarity Level: 2-5, Values: \$1 up.

II-A-4 Large Date (IE), Rarity Level: 2-5, Values: \$1 up.

II-A-5 Small Over Large Date (IE), Rarity Level: 4-6, Values: \$15 up.

II-A-6 Large Over Small Date (IE), Rarity Level: 3-5, Values: \$10 up.

II-A-7 Blundered Date (E), Rarity Level: 6-7, Values: \$50 up.

II-A-8 Corrected Blundered Date (IE), Rarity Level: 3-5, Values: \$5 up.

II-A-9 Wrong Font Date Digit (IE), Rarity Level: 5-6, Values: Minimal.

II-A-10 Worn, Broken or Damaged Punch (IWE), Rarity Level: 5-6, Values: \$5 up.

II-A-11 Expedient Punch (IWE), Rarity Level: 5-6, Values: \$10 up.

II-A-12 Blundered Digit (E), Rarity Level: 4-5, Values: \$50 up.

II-A-13 Corrected Blundered Digit (IE), Rarity Level: 3-6, Values: \$10 up.

II-A-14 Doubled Digit (IWE), Rarity Level: 2-6, Values: \$2 up.

II-A-15 Wrong Style or Font Letter or Digit (IE), Rarity Level: 3-5, Values: Minimal.

II-A-1

II-A-2

II-A-2

- II-A-16 One Style or Font Over Another (IE), Rarity Level: 4-6, Values: \$10 up.
- II-A-17 Letter Over Digit (E), Rarity Level: 6-7, Values: \$25 up.
- II-A-18 Digit Over Letter (E), Rarity Level: 6-7, Values: \$25 up.
- II-A-19 Omitted Letter or Digit (IWE), Rarity Level: 4-6, Values: \$5 up.
- II-A-20 Blundered Letter (E), Rarity Level: 6-7, Values: \$50 up.
- II-A-21 Corrected Blundered Letter (IE), Rarity Level: 1-3, Values: \$10 up.
- II-A-22 Doubled Letter (IWE), Rarity Level: 2-6, Values: \$2 up.
- II-A-23 Blundered Design Element (IE), Rarity Level: 6-7, Values: \$50 up.
- II-A-24 Corrected Blundered Design Element (IE), Rarity Level: 3-5, Values: \$10 up.
- II-A-25 Large Over Small Design Element (IE), Rarity Level: 4-6, Values: \$2 up.
- II-A-26 Omitted Design Element (IWE), Rarity Level: 5-7, Values: \$10 up.
- II-A-27 Doubled Design Element (IWE), Rarity Level: 2-6, Values: \$2 up.
- II-A-28 One Design Element Over Another (IE), Rarity Level: 3-6, Values: \$5 up.
- II-A-29 Reducing Lathe Doubling (WE), Rarity Level: 6-7, Values: \$50 up.
- II-A-30 Extra Design Element (IE), Rarity Level: 3-5, Values: \$10 up.
- II-A-31 Modified Design (IWE), Rarity Level: 1-5, Values: No Value up.
- II-A-32 Normal Design (I), Rarity Level: 1, Values: No Extra Value.
- II-A-33 Design Mistake (IE), Rarity Level: 2-6, Values: \$1 up.
- II-A-34 Defective Die Design (IWE), Rarity Level: 1, Values: No Value.
- II-A-35 Pattern (I), Rarity Level: 6-7, Values: \$100 up.
- II-A-36 Trial Design (I), Rarity Level: 5-7, Values: \$100 up.
- II-A-37 Omitted Designer's Initial (IWE), Rarity Level: 3-7, Values: \$1 up.
- II-A-38 Layout Mark (IE), Rarity Level: 5-7, Values: Minimal.
- II-A-39 Abnormal Reeding (IWE), Rarity Level: 2-5, Values: \$1 up.
- II-A-40 Modified Die or Hub (IWE), Rarity Level: 1-5, Values: No Value up.
- II-A-41 Numbered Die (I), Rarity Level: 3-5, Values: \$5 up.
- II-A-42 Plugged Die (IW), Rarity Level: 5-6, Values: Minimal.
- II-A-43 Cancelled Die (IE), Rarity Level: 3-6, Values: No Value up.

- II-A-44 Hardness Test Marked Die (IE), Rarity Level: 7, Values: \$100 up.
- II-A-45 Coin Simulation (IE), Rarity Level: 6-7, Values: \$100 up, but may be illegal to own.
- II-A-46 Punching Mistake (IE), Rarity Level: 2-6, Values: \$1 up.
- II-A-47 Small Over Large Design (IE), Rarity Level: 4-6, Values: \$5 up.
- II-A-48 Doubled Punch (IE), Rarity Level: 5-7, Values: \$5 up.
- II-A-49 Mint Display Sample (I) Rarity Level: 7, Values not established.
- II-A-50 Center Dot, Stud or Circle (IE) Rarity Level: 7, much more common on early cents, Values not established

● HUB DOUBLING VARIETIES (II-B)

This section includes eight classes of hub doubling. Each class is from a different cause, described by the title of the class. At the latest count over 2,500 doubled dies have been reported in the U.S. coinage, the most famous being examples of the 1955, 1969-S and 1972 cent dies.

- II-B-I Rotated Hub Doubling (WE), Rarity Level: 3-6, Values: \$1 up
- II-B-II Distorted Hub Doubling (WE), Rarity Level: 3-6, Values: \$1 up.
- II-B-III Design Hub Doubling (IWE), Rarity Level: 3-6, Values: \$1 up to five figure amounts.
- II-B-IV Offset Hub Doubling (WE), Rarity Level: 4-6, Values: \$15 up.
- II-B-V Pivoted Hub Doubling (WE), Rarity Level: 3-6, Values: \$10 up.
- II-B-VI Distended Hub Doubling (WE), Rarity Level: 2-5, Values: \$1 up.
- II-B-VII Modified Hub Doubling (IWE), Rarity Level: 2-5, Values: \$1 up.
- II-B-VIII Tilted Hub Doubling (WE), Rarity Level: 4-6, Values: \$5 up.

● MINTMARK VARIETIES (II-C)

Mintmarks are punched into U.S. coin dies by hand (Up to 1985 for proof coins, to 1990 for cents and nickels and 1991 for other denominations). Variations resulting from mistakes in the punching are listed in this section. Unless exceptionally mispunched, values are usually estimated at 150 percent of numismatic value. Slightly tilted or displaced mintmarks have no value.

- II-C-1 Doubled Mintmark (IE), Rarity Level: 2-6, Values: 50 cents up.
- II-C-2 Separated Doubled Mintmark (IE), Rarity Level: 5-6, Values: \$15 up.
- II-C-3 Over Mintmark (IE), Rarity Level: 3-6, Values: \$2 up.

- II-C-4 Tripled Mintmark (IE), Rarity Level: 3-5, Values: 50 up.
- II-C-5 Quadrupled Mintmark (IE), Rarity Level: 4-6, Values: \$1 up.
- II-C-6 Small Mintmark (IE), Rarity Level: 2-5, Values: No Extra Value up.
- II-C-7 Large Mintmark (IE), Rarity Level: 2-5, Values: No Extra Value up.
- II-C-8 Large Over Small Mintmark (IE), Rarity Level: 2-5, Values: \$2 up.
- II-C-9 Small Over Large Mintmark (IE), Rarity Level: 3-6, Values: \$5 up.
- II-C-10 Broken Mintmark Punch (W), Rarity Level: 5-6, Values: \$5 up.
- II-C-11 Omitted Mintmark (IWE), Rarity Level: 4-7, Values: \$125 up.
- II-C-12 Tilted Mintmark (IE), Rarity Level: 5-7, Values: \$5 up.
- II-C-13 Blundered Mintmark (E), Rarity Level: 4-6, Values: \$5 up.
- II-C-14 Corrected Horizontal Mintmark (IE), Rarity Level: 4-6, Values: \$5 up.
- II-C-15 Corrected Upside Down Mintmark (IE), Rarity Level: 4-6, Values: \$5 up.
- II-C-16 Displaced Mintmark (IE), Rarity Level: 4-6, Values: \$5 to \$10.
- II-C-17 Modified Mintmark (IWE), Rarity Level: 1-4, Values: No Extra Value up.
- II-C-18 Normal Mintmark (I), Rarity Level: 1, Values: No Extra Value.
- II-C-19 Doubled Mintmark Punch (I), Rarity Level: 6-7, Values: No Extra Value up.
- II-C-20 Upside Down Mintmark (E) Rarity Level 6-7, Values: \$5 up.
- II-C-21 Horizontal Mintmark (E) Rarity Level 6-7, Values: \$5 up.
- II-C-22 Wrong Mintmark (E) Rarity Level 6-7, Values \$15 up. (Example has a D mintmark in the date, but was used at Philadelphia.)

II-C-3

II-C-3

II-C-1

II-C-4

● **DIE, COLLAR AND HUB CRACKS (II-D)**

Cracks in the surface of the die allow coin metal to be forced into the crack during the strike, resulting in raised irregular lines of coin metal above the normal surface of the coin. These are one of the commonest forms of die damage and wear, making them easily collectible.

Collar cracks and hub cracks are added to this section because the causes and effects are similar or closely associated.

Die cracks, collar cracks and hub cracks are the result of wear and tear on the tools, with intentional use assumed for all classes.

II-D-1 Die Crack (W), Rarity Level: 1-3, Values: 10 to \$1, \$25 up on a proof coin with a rarity level of 6-7.

II-D-2 Multiple Die Cracks (W), Rarity Level: 1-3, Values: 25 cents to \$2.

II-D-3 Head-To-Rim Die Crack (Lincoln Cent) (W), Rarity Level: 2-6, Values: 25 to \$10 for multiple die cracks.

II-D-4 Split Die (W), Rarity Level: 5-6, Values: \$10 up.

II-D-5 Rim-To-Rim Die Crack (W), Rarity Level: 2-5, Values: \$1 up.

II-D-6 Collar Crack (W), Rarity Level: 4-6, Values: \$10 up.

II-D-7 Hub Crack (W), Rarity Level: 3-5, Values: \$1-\$2.

● **DIE BREAKS (II-E)**

Breaks in the surface of the die allow coin metal to squeeze into the resulting holes, causing raised irregular areas above the normal surface of the coin. Die chips and small die breaks are nearly as common as the die cracks, but major die breaks, which extend in from the edge of the coin, are quite rare on the larger coins.

If the broken piece of the die is retained, the resulting design will be above or below the level of the rest of the surface.

II-E-1 Die Chip (W), Rarity Level: 1-2, Values: 10 to \$1.

II-E-2 Small Die Break (W), Rarity Level: 1-3, Values: 10 to \$2.

II-E-3 Large Die Break (W), Rarity Level: 3-5, Values: \$1 to \$50 and up.

II-E-4 Rim Die Break (W), Rarity Level: 2-3, Values: 25 cents to \$5.

II-E-5 Major Die Break (WE), Rarity Level: 3-6, Values: \$5 to \$100 and up.

II-E-6 Retained Broken Die (W), Rarity Level: 3-5, Values: \$1 to \$10 and up.

II-E-7 Retained Broken Center of the Die (W), Rarity Level: 6-7, Values: \$100 up.

II-E-8 Laminated Die (W), Rarity Level: 3-5, Values: 10 cents to \$5.

II-E-9 Chipped Chrome Plating (W), Rarity Level: 4-5, Values: \$10 to \$25 on proofs.

II-E-10 Collar Break (W), Rarity Level: 4-6, Values: \$5 to \$25 and up.

II-E-11 Broken Letter or Digit on an Edge Die (W), Rarity Level: 4-6, Values: Minimal.

II-E-12 "Bar" Die Break (W), Rarity Level: 3-5, Values: 25 to \$20.

II-E-13 Hub Break (W), Rarity Level: 4-6, Values: 50 to \$10 and up.

● **"BIE" VARIETIES (II-F)**

A series of small die breaks or die chips in the letters of "LIBERTY" mostly on the wheat-reverse Lincoln cent are actively collected. The name results from the resemblance to an "I" between the "B" and "E" on many of the dies, but they are found between all of the letters in different cases. Well over 1,500 dies are known and cataloged. Numerous more recent examples are known.

II-F-1 ILI Die Variety (W), Rarity Level: 4-5, Values: 25 cents to \$10.

II-F-2 LII Die Variety (W), Rarity Level: 3-5, Values: 50 cents to \$15.

II-F-3 IIB Die Variety (W), Rarity Level: 3-5, Values: 50 cents to \$15.

II-F-4 BIE Die Variety (W), Rarity Level: 3-5, Values: \$1 to \$20.

II-F-5 EIR Die Variety (W), Rarity Level: 3-5, Values: 50 to \$15.

II-F-6 RIT Die Variety (W), Rarity Level: 4-5, Values: \$2 to \$25.

II-F-7 TIY Die Variety (W), Rarity Level: 4-5, Values: \$5 to \$30.

II-F-8 TYI Die Variety (W), Rarity Level: 4-5, Values: \$2 to \$25.

● **WORN AND DAMAGED DIES, COLLARS AND HUBS (II-G)**

Many dies are continued deliberately in service after they have been damaged, dented, clashed or show design transfer, since none of these classes actually affect anything but the appearance of the coin. The root cause is wear, but intent or mistakes may enter the picture.

II-G-1 Dented Die, Collar or Hub (IWE), Rarity Level: 3-5, Values: 25 to \$5.

II-G-2 Damaged Die, Collar or Hub (IWE), Rarity Level: 3-5, Values: 25 to \$5.

II-G-3 Worn Die, Collar or Hub (IWE), Rarity Level: 2-3, Values: No Extra Value to Minimal Value.

II-G-4 Pitted or Rusted Die, Collar or Hub (IWE), Rarity Level: 3-4, Values: No Extra Value, marker only.

**II-G-5**

II-G-5 Heavy Die Clash (IWE), Rarity Level: 4-5, Values: \$1 to \$10 and up.

II-G-6 Heavy Collar Clash (IWE), Rarity Level: 3-4, Values: \$1 to \$5 and up.

II-G-7 Heavy Design Transfer (IWE), Rarity Level: 3-4, Values: 10 cents to \$1.

● DIE PROGRESSIONS (II-H)

The progression section consists of three classes. These are useful as cataloging tools for many different die varieties, but especially the die cracks and die breaks which may enlarge, lengthen or increase in number.

II-H-1 Progression (W), Rarity Level: 3-5, Values: \$1 up.

II-H-2 Die Substitution (IW), Rarity Level: 2-4, Values: No Extra Value to Minimal Value.

II-H-3 Die Repeat (I), Rarity Level: 2-4, Values: No Extra Value to Minimal Value.

● DIE SCRATCHES, POLISHED AND ABRADED DIES (II-I)

This section consists of those classes having to do with the use of an abrasive in some form to intentionally polish proof dies, or repair the circulating die surface. Several classes which previously were referred to as "polished" now are listed as "abraded."

II-I-1 Die Scratch (IW), Rarity Level: 1-2, Values: No Extra Value to 10 cents to 25 cents, as a marker.

II-I-2 Polished (proof) Die (IW), Rarity Level: 1, Values: No Extra Value.

II-I-3 Abraded (Circulation) Die (IW), Rarity Level: 1-2, Values: No Extra Value up to \$10.

II-I-4 Inside Abraded Die Doubling (IW), Rarity Level: 1-3, Values: No Extra Value to \$1.

II-I-5 Outside Abraded Die Doubling (IW), Rarity Level: 1-3, Values: No Extra Value to \$1.

II-I-6 Lathe Marks (IW), Rarity Level: 5-7, Values: No Extra Value, marker only.

Striking varieties

DIVISION III

Once the dies are made and the planchets have been prepared, they are struck by a pair of dies and become a coin. In this division, we list the misstrikes resulting from human or mechanical malfunction in the striking process. These are one-of-a-kind varieties, but there may be many similar coins that fall in a given class.

Multiples and combinations of classes must be considered on a case by case basis. The first several sections match the planchet sections indicated in the title.

● STRUCK ON DEFECTIVE ALLOY MIX PLANCHETS (III-A)

This section includes those classes of coins struck on planchets that were made from a defective alloy.

III-A-1 Struck on an Improper Alloy Mix Planchet (IE), Rarity Level: 2-3, Values: 10 cents to \$2.

III-A-2 Struck on a Planchet With Slag Inclusions (IE), Rarity Level: 5-6, Values: \$10 up.

● STRUCK ON DAMAGED, DEFECTIVE OR ABNORMAL PLANCHET (III-B)

Coins get struck on many strange objects. The more common of course are planchets which have been damaged in some way in the production process. In most of the classes in this section intent is at least presumed, if not specifically listed as a cause.

III-B-1 Struck on a Defective Planchet (IWE), Rarity Level: 4-6, Values: \$5 to \$10 and up.

III-B-2 Struck on a Mechanically Damaged Planchet (IWE), Rarity Level: 5-6, Values: \$10 to \$20 and up.

III-B-3 Struck on a Rolled Thin Planchet (IWE), Rarity Level: 5-6, Values: \$2 to \$5 and up.

III-B-4 Struck on a Rolled Thick Planchet (IWE), Rarity Level: 5-6, Values: \$35 to \$50 and up.

III-B-5 Struck on a Tapered Planchet (WE), Rarity Level: 4-6, Values: \$2 to \$5 and up.

III-B-6 Struck on a Partially Unplated Planchet (WE), Rarity Level: 5, Values: \$10 up.

III-B-7 Struck on an Unplated Planchet (WE), Rarity Level: 6-7, Values: \$100 up.

III-B-11

III-B-19

III-B-29

III-B-8 Struck on a Bubbled Plating Planchet (IWE), Rarity Level: 1, Values: No Value.

III-B-9 Struck on an Included Gas Bubble Planchet (WE), Rarity Level: 5-6, Values: \$5 up.

III-B-10 Struck on a Partially Unclad Planchet (WE), Rarity Level: 5-6, Values: \$5 up.

III-B-11 Struck on an Unclad Planchet (WE), Rarity Level: 4-5, Values: \$5 and up.

III-B-12 Struck on an Undersize Planchet (WE), Rarity Level: 4-6, Values: Minimal.

III-B-13 Struck on an Oversize Planchet (WE), Rarity Level: 6-7, Values: Minimal.

III-B-14 Struck on an Improperly Prepared Proof Planchet (IWE), Rarity Level: 3-5, Values: \$5 up.

III-B-15 Struck on an Improperly Annealed Planchet (IWE), Rarity Level: 4-5, Values: \$5 up.

III-B-16 Struck on a Faulty Upset Edge Planchet (IWE), Rarity Level: 4-5, Values: \$1 to \$2.

III-B-17 Struck on a Rolled In Metal Planchet (WE), Rarity Level: 4-6, Values: \$2 up.

III-B-18 Struck on a Weld Area Planchet (WE), Rarity Level: 6, Values: \$25 to \$50.

III-B-19 Struck on a Strike Clip Planchet (W), Rarity Level: 6-7, Values: \$25 up.

III-B-20 Struck on an Unpunched Center Hole Planchet (WE), Rarity Level: 4-6, Values: \$1 and up.

III-B-21 Struck on an Incompletely Punched Center Hole Planchet (WE), Rarity Level: 6-7, Values: \$5 up.

III-B-22 Struck on an Uncentered Center Hole Planchet (WE), Rarity Level: 6-7, Values: \$10 up.

III-B-23 Struck on a Multiple Punched Center Hole Planchet (WE), Rarity Level: 7, Values: \$25 up.

III-B-24 Struck on an Unintended Center Hole Planchet (WE), Rarity Level: 6-7, Values: \$25 and up.

III-B-25 Struck on a Wrong Size or Shape Center Hole Planchet (WE), Rarity Level: 5-7, Values: \$5 up.

III-B-26 Struck on Scrap Coin Metal (E), Rarity Level: 4-6, Values: \$10 up.

III-B-27 Struck on Junk Non Coin Metal (E), Rarity Level: 4-6, Values: \$15 up.

III-B-28 Struck on a False Planchet (E), Rarity Level: 3-5, Values: \$35 up.

III-B-29 Struck on Bonded Planchets (E), Rarity Level: 6-7, Values: \$50 up.

● STRUCK ON A CLIPPED PLANCHET (III-C)

Coins struck on clipped blanks, or planchets, exhibit the same missing areas as they did before striking, modified by the metal flow from the strike which rounds the edges and tends to move metal into the missing areas. Values for blanks will run higher than planchets with similar clips.

- III-C-1 Struck on a Disc Clip Planchet (WE), Rarity Level: 4-5, Values: \$1 on regular coins, \$20 and up for clad coins.
- III-C-2 Struck on a Curved Clip Planchet - to 5% (WE), Rarity Level: 3-5, Values: 50 cents up.
- III-C-3 Struck on a Curved Clip Planchet - (6 to 10%) (WE), Rarity Level: 4-5, Values: \$1 up.
- III-C-4 Struck on a Curved Clip Planchet - (11 to 25%) (WE), Rarity Level: 4-5, Values: \$2 up.
- III-C-5 Struck on a Curved Clip Planchet - (26 to 60%) (WE), Rarity Level: 4-6, Values: \$10 up.
- III-C-6 Struck on a Double Curved Clip Planchet (WE), Rarity Level: 3-4, Values: \$2 up.
- III-C-7 Struck on a Triple Curved Clip Planchet (WE), Rarity Level: 4-5, Values: \$5 up.
- III-C-8 Struck on a Multiple Curved Clip Planchet (WE), Rarity Level: 4-6, Values: \$5 up.
- III-C-9 Struck on an Overlapping Curved Clipped Planchet (WE), Rarity Level: 5-6, Values: \$15 up.
- III-C-10 Struck on an Incomplete Curved Clip Planchet (WE), Rarity Level: 4-5, Values: \$10 up.
- III-C-11 Struck on an Oval Clip Planchet (WE), Rarity Level: 5-6, Values: \$20 up.
- III-C-12 Struck on a Crescent Clip Planchet - (61% or more) (WE), Rarity Level: 6-7, Values: \$100 up.
- III-C-13 Struck on a Straight Clip Planchet (E), Rarity Level: 4-6, Values: \$10 up.
- III-C-14 Struck on an Incomplete Straight Clip Planchet (WE), Rarity Level: 5-6, Values: \$20 up.
- III-C-15 Struck on a Ragged Clip Planchet (E), Rarity Level: 4-6, Values: \$15 up.
- III-C-16 Struck on an Outside Corner Clip Planchet (E), Rarity Level: 7, Values: \$100 up.
- III-C-17 Struck on an Inside Corner Clip Planchet (E), Rarity Level: Unknown outside mint., Values: -.
- III-C-18 Struck on an Irregularly Clipped Planchet (E), Rarity Level: 6-7, Values: \$20 up.
- III-C-19 Struck on an Incompletely Punched Scalloped or Multi-Sided Planchet (E), Rarity Level: 7, Values: \$20 up.

III-C-3

III-C-15

● STRUCK ON A LAMINATED, SPLIT OR BROKEN PLANCHET (III-D)

This section has to do with the splitting, cracking or breaking of a coin parallel to the faces of the coin, or at least very nearly parallel, or breaks at right angles to the faces of the coin.

Lamination cracks and missing metal of any size below a split planchet are too common in the 35-percent silver 1942-1945 nickels to be collectible or have any significant value.

- III-D-1 Struck on a Small Lamination Crack Planchet (W), Rarity Level: 3-4, Values: 10 up.
- III-D-2 Struck on a Large Lamination Crack Planchet (W), Rarity Level: 3-6, Values: \$1 up.
- III-D-3 Struck on a Split Planchet (W), Rarity Level: 4-6, Values: \$5 up.
- III-D-4 Struck on a Hinged Split Planchet (W), Rarity Level: 5-6, Values: \$35 up.
- III-D-5 Struck on a Planchet With a Clad Layer Missing (W), Rarity Level: 4-5, Values: \$15 up.
- III-D-6 Struck on a Planchet With Both Clad Layers Missing (W), Rarity Level: 4-5, Values: \$25 up.

III-D-7

III-E-2

III-D-7 Struck on a Separated Clad Layer or Lamination (W), Rarity Level: 6-7, Values: \$75 up.

III-D-8 Struck on a Broken Planchet Before the Strike (W), Rarity Level: 3-5, Values: \$10 up.

III-D-9 Broken Coin During or After the Strike (W), Rarity Level: 4-6, Values: \$20 up.

III-D-10 Struck Coin Fragment Split or Broken During or After the Strike (W), Rarity Level: 3-5, Values: \$5 up.

III-D-11 Reedless Coin Broken During or After the Strike (W), Rarity Level: Unknown, Values: -.

● STRUCK ON WRONG STOCK PLANCHETS (III-E)

These classes cover those cases where the wrong stock was run through the blanking press, making planchets of the correct diameter, but of the wrong thickness, alloy or metal or a combination of incorrect thickness and metal.

III-E-1 Struck on a Half Cent-Stock Planchet (IE), Rarity Level: Unknown, Values: No Value Established.

III-E-2 Struck on a Cent-Stock Planchet (IE), Rarity Level: Unknown, Values: No Value Established.

III-E-3 Struck on a Two-Cent-Stock Planchet (E), Rarity Level: Unknown, Values: -.

III-E-4 Struck on a Three-Cent-Silver Stock Planchet (E), Rarity Level: Unknown, Values: -.

III-E-5 Struck on a Three-Cent-Nickel Stock Planchet (E), Rarity Level: Unknown, Values: -.

III-E-6 Struck on a Half Dime-Stock Planchet (E), Rarity Level: Unknown, Values: -.

III-E-7 Struck on a Dime-Stock Planchet (E), Rarity Level: 5-6, Values: \$20 up.

III-E-8 Struck on a Twenty-Cent-Stock Planchet (E), Rarity Level: Unknown, Values: -.

III-E-9 Struck on a Quarter-Stock Planchet (E), Rarity Level: 6, Values: \$50 up.

III-E-10 Struck on a Half Dollar-Stock Planchet (E), Rarity Level: 6-7, Values: \$100 up.

III-E-11 Struck on a Dollar-Stock Planchet (E), Rarity Level: 6-7, Values: \$300 up.

III-E-12 Struck on a Token/Medal-Stock Planchet (E), Rarity Level: 7, Values: No Value Established.

III-E-13 Struck on a Wrong Thickness Spoiled Planchet (IWE), Rarity Level: 7, Values: \$50 up.

III-E-14 Struck on a Correct Thickness Spoiled Planchet (IWE), Rarity Level: Unknown, Values: No Value Established.

III-E-15 Struck on a Cut Down Struck Token (IWE), Rarity Level: 6-7, Values: \$50 up.

III-E-16 Struck on an Experimental or Pattern-Stock Planchet (IE), Rarity Level: 7, Values: \$50 up.

III-E-17 Struck on a Proof-Stock Planchet (IE), Rarity Level: 7, Values: \$100 up.

III-E-18 Struck on an Adjusted Specification-Stock Planchet (IE), Rarity Level: 3-7, Values: No Value to \$5 and up.

III-E-19 Struck on a Trial Strike-Stock Planchet (IE), Rarity Level: Unknown, Values: No Value Established.

III-E-20 U.S. Coin Struck on a Foreign-Stock Planchet. (E), Rarity Level: 5, Values: \$35 up.

III-E-7

III-G-18

III-E-21 Foreign Coin Struck on a Foreign-Stock Planchet (E), Rarity Level: 5-6, Values: \$25 up.

III-E-22 Struck on a Non-Standard Coin Alloy (IE), Rarity Level: 4-7, Values: \$20 up.

●EXTRA METAL (III-F)

The term "extra metal" for the purpose of this section includes both extra metal added to the blank during the blanking operation and metal powder added to the planchet during the annealing operation.

III-F-1 Struck on a Type 1 Blank With Extra Metal (W), Rarity Level: Unknown, Values: -.

III-F-2 Struck on a Type 2 Planchet With Extra Metal (W), Rarity Level: 4-5, Values: \$10 up.

III-F-3 Struck on a Sintered Coating Planchet (W), Rarity Level: 6-7, Values: \$35 up.

●STRUCK ON NORMAL OR ABNORMAL BLANKS, OR PLANCHETS (III-G)

This section includes coins struck on either a blank, as it comes from the blanking press, or as a planchet that has passed through the upsetting mill. Added to this section are those planchets which are normal until they are struck by the wrong dies. These differ from the wrong stock planchets because the wrong stock planchets are already a variety before they are struck.

III-G-1 Struck on a Type 1 Blank (IWE), Rarity Level: 4-6, Values: \$10 up.

III-G-2 Struck on a Type 2 Planchet (I), Rarity Level: 1, Values: No Extra Value.

III-G-3 Struck on a Purchased Planchet (I), Rarity Level: 1, Values: No Extra Value.

III-G-4 Struck on a Mint-Made Planchet (I), Rarity Level: 1, Values: No Extra Value.

III-G-5 Struck on an Adjustment-Marked Planchet (I), Rarity Level: 4-7, Values: Minimal, and may reduce value of coin in some cases.

III-G-6 Struck on a Hardness Test-Marked Planchet (I), Rarity Level: 6-7, Values: \$10 up.

III-G-7 Wrong Planchet or Metal on a Half Cent Planchet (IE), Rarity Level: 5-7, Values: \$100 up.

III-G-8 Wrong Planchet or Metal on a Cent Planchet (IE), Rarity Level: 3-6, Values: \$25 up.

III-G-9 Wrong Planchet or Metal on a Nickel Planchet (E), Rarity Level: 4-6, Values: \$35 up.

III-G-10 Wrong Planchet or Metal on a Dime Planchet (E), Rarity Level: 4-6, Values: \$50 up.

III-G-11 Wrong Planchet or Metal on a Quarter Planchet (E), Rarity Level: 4-6, Values: \$100 up.

III-G-12 Wrong Planchet or Metal on a Half Dollar Planchet (E), Rarity Level: 6-7, Values: \$500 up.

III-G-13 Wrong Planchet or Metal on a Dollar Planchet (E), Rarity Level: 7, Values: \$500 up.

III-G-14 Wrong Planchet or Metal on a Gold Planchet (E), Rarity Level: 7, Values: \$1000 up.

III-G-15 Struck on a Wrong Series Planchet (IE), Rarity Level: 6-7, Values: \$1500 up.

III-G-16 U.S. Coin Struck on a Foreign Planchet (E), Rarity Level: 5-7, Values: \$35 up.

III-G-17 Foreign Coin Struck on a U.S. Planchet (E), Rarity Level: 6-7, Values: \$50 up.

III-G-18 Foreign Coin Struck on a Wrong Foreign Planchet (E), Rarity Level: 6-7, Values: \$50 up.

III-G-19 Struck on a Medal Planchet (E),
Rarity Level: 6-7, Values: \$100 up.

III-G-20 Medal Struck on a Coin Planchet
(IE), Rarity Level: 3-5, Values: \$10 up.

III-G-21 Struck on an Official Sample Plan-
chet (IE), Rarity Level: Unknown,
Values: No Value Established.

III-G-22 Struck Intentionally on a Wrong
Planchet (I), Rarity Level: 6-7, Values:
Mainly struck as Presentation Pieces,
full numismatic value.

III-G-23 Non-Proof Struck on a Proof Plan-
chet (IE), Rarity Level: 6-7, Values:
\$500 up.

● **STRUCK ON COIN METAL STRIP (III-H)**

Pieces of the coin metal strip do manage at
times to escape into the coin press.

III-H-1 (See I-H-1 Punched Coin Metal
Strip), Rarity Level: Impossible,
Values: -.

III-H-2 Struck on Chopped Coin Metal
Strip (E), Rarity Level: 6-7, Values:
\$25 up.

● **DIE ADJUSTMENT STRIKES (III-I)**

As the dies are set up and adjusted in
the coin press, variations in the strike occur
until the dies are properly set. Test strikes are
normally scrapped, but on occasion reach circu-
lation.

III-I-1 Die Adjustment Strike (IE), Rarity
Level: 5-6, Values: \$35 up.

III-I-2 Edge Strike (E), Rarity Level: 5-6,
Values: \$10 to \$20 and up.

III-I-3 Weak Strike (W), Rarity Level: 1,
Values: No Extra Value.

III-I-4 Strong Strike (IWE), Rarity Level:
1, Values: No value except for the
premium that might be paid for a
well struck coin.

III-I-5 Jam Strike (IE), Rarity Level: 7,
Values: \$50 up.

III-I-6 Trial Piece Strike (I), Rarity Level: 6-7,
Values: \$100 up.

III-I-7 Edge-Die Adjustment Strike (I),
Rarity Level: 5-7, Values: \$5 up.

III-I-8 Uniface Strike (I), Rarity Level 7,
Values: \$50 up.

III-I-3

● **INDENTED, BROCKAGE AND COUNTER- BROCKAGE STRIKES (III-J)**

Indented and uniface strikes involve an
extra unstruck planchet between one of the
dies and the planchet being struck. Brockage
strikes involve a struck coin between one of the
dies and the planchet and a counter-brockage
requires a brockage coin between one of the
dies and the planchet.

A cap, or capped die strike results when a
coin sticks to the die and is squeezed around it
in the shape of a bottle cap.

III-J-1 Indented Strike (W), Rarity Level:
3-6, Values: \$5 up.

III-J-2 Uniface Strike (W), Rarity Level: 3-5,
Values: \$15 up.

III-J-3 Indented Strike By a Smaller Planchet
(WE), Rarity Level: 5-7, Values: \$100
up.

III-J-4 Indented Second Strike (W), Rarity
Level: 3-5, Values: \$10 up, about the
same as a regular double strike of
comparable size.

III-J-5 Partial Brockage Strike (W), Rarity
Level: 3-6, Values: \$15 up.

III-J-6 Full Brockage Strike (W), Rarity
Level: 3-6, Values: \$5 up.

III-J-7 Brockage Strike of a Smaller Coin
(WE), Rarity Level: 6-7, Values: \$200
up.

III-J-8 Brockage Strike of a Struck Coin Frag-
ment (WE), Rarity Level: 4-6, Values:
\$5 up.

III-J-9 Brockage Second Strike (WE), Rarity
Level: 3-5, Values: \$5 up.

III-J-10 Partial Counter-Brockage Strike
(WE), Rarity Level: 3-5, Values: \$10
up.

III-J-11 Full Counter-Brockage Strike (WE),
Rarity Level: 5-7, Values: \$100 up.

III-J-12 Counter-Brockage Second Strike
(WE), Rarity Level: 4-6, Values: \$10
up.

III-J-13 Full Brockage-Counter-Brockage
Strike (WE), Rarity Level: 6-7, Values:
\$150 up.

III-J-14 Multiple Brockage or Counter-
Brockage Strike (WE), Rarity Level:
5-7, Values: \$100 up.

III-J-15 Capped Die Strike (WE), Rarity
Level: 6-7, Values: \$500 up.

III-J-16 Reversed Capped Die Strike (WE),
Rarity Level: 7, Values: \$1,000 up.

III-J-1

III-J-3

III-J-4

● STRUCK THROUGH ABNORMAL OBJECTS (III-K)

This section covers most of the objects or materials which might come between the planchet and the die and be struck into the surface of the coin. Unless noted, the materials - even the soft ones - are driven into the surface of the coin.

III-K-1 Struck Through Cloth (IWE), Rarity Level: 3-6, Values: \$35 up.

III-K-2 Struck Through Wire (IWE), Rarity Level: 3-6, Values: \$5 up.

III-K-3 Struck Through Thread (IWE), Rarity Level: 3-6, Values: \$5 up.

III-K-4 Struck Through Dirt-and-Grease-Filled Die (IWE), Rarity Level: 1-4, Values: 10 cents to 25 cents up, but no value on a worn or circulated coin.

III-K-5 Struck Through a Dropped Filling (IWE), Rarity Level: 5-6, Values: \$10 up.

III-K-6 Struck Through Wrong Metal Fragments (IWE), Rarity Level: 4-6, Values: \$1 up.

III-K-7 Struck Through an Unstruck Planchet Fragment (IWE), Rarity Level: 3-5, Values: \$1 up.

III-J-6

III-K-1

III-K-7

III-K-7

III-K-8

III-K-8

III-K-8 Struck Through a Rim Burr (IWE),
Rarity Level: 3-5, Values: \$1 to \$2 and up.

III-K-9 Struck Through Split-Off Reeding (IWE),
Rarity Level: 5-6, Values: \$25 up.

III-K-10 Struck Through a Feed Finger (IWE),
Rarity Level: 5-7, Values: \$25 to \$50 and up.

III-K-11 Struck Through Miscellaneous Objects (IWE),
Rarity Level: 4-6, Values: \$1 up.

III-K-12 Struck Through Progression (IWE),
Rarity Level: 4-6, Values: \$1 up.

Note: Some 1987 through 1994 quarters are found without mintmarks, classed as III-K-4, a Filled Die. Values depend on market conditions. Filled dies have value ONLY on current, uncirculated grade coins.

● DOUBLE STRIKES (III-L)

Only coins which receive two or more strikes by the die pair fall in this section and are identified by the fact that both sides of the coin are affected. Unless some object interferes, an equal area of both sides of the coin will be equally doubled.

The exception is the second strike with a loose die, which will double only one side of a coin, but is a rare form usually occurring only on proofs. A similar effect is flat field doubling from die chatter.

III-L-1 Close Centered Double Strike (WE),
Rarity Level: 4-6, Values: \$15 up.

III-L-2 Rotated Second Strike Over a Centered First Strike (WE),
Rarity Level: 4-6, Values: \$15 up.

III-L-3 Off-Center Second Strike Over a Centered First Strike (WE),
Rarity Level: 4-6, Values: \$15 up.

III-L-4 Off-Center Second Strike Over an Off-Center First Strike (WE),
Rarity Level: 4-6, Values: \$10 up.

III-L-5 Off-Center Second Strike Over a Broadstrike (WE),
Rarity Level: 5-6, Values: \$20 up.

III-L-6 Centered Second Strike Over an Off-Center First Strike (WE),
Rarity Level: 5-6, Values: \$50 up.

III-L-7 Obverse Struck Over Reverse (WE),
Rarity Level: 5-6, Values: \$25 up.

III-L-8 Nonoverlapping Double Strike (WE),
Rarity Level: 5-6, Values: \$20 up.

III-L-9 Struck Over a Different Denomination or Series (WE),
Rarity Level: 6, Values: \$300 and up.

III-L-10 Chain Strike (WE),
Rarity Level: 6, Values: \$300 up for the pair of coins that were struck together.

III-L-11 Second-Strike Doubling From a Loose Die (W),
Rarity Level: 6-7, Values: \$200 up.

III-L-12 Second-Strike Doubling From a Loose Screw Press Die (W),
Rarity Level: 5-6, Values: \$100 up.

III-L-13 Second Strike on an Edge Strike (WE),
Rarity Level: 5-6, Values: \$20 up.

III-L-14 Folded Planchet Strike (WE), Rarity Level: 5-7, Values: \$100 up.

III-L-15 Triple Strike (WE), Rarity Level: 6-7, Values: \$100 up.

III-L-16 Multiple Strike (WE), Rarity Level: 6-7, Values: \$200 up.

III-L-17 U.S. Coin Struck Over a Struck Foreign Coin (WE), Rarity Level: 6-7, Values: \$300 up.

III-L-18 Foreign Coin Struck Over a Struck U.S. Coin (WE), Rarity Level: 6-7, Values: \$400 up.

III-L-19 Foreign Coin Struck Over a Struck Foreign Coin (WE), Rarity Level: 7, Values: \$500 up.

III-L-20 Double Strike on Scrap or Junk (E), Rarity Level: 6, Values: \$50 up.

III-L-21 Struck on a Struck Token or Medal (E), Rarity Level: 5-6, Values: \$100 up.

III-L-22 Double-Struck Edge Motto or Design (E), Rarity Level: 6-7, Values: \$200 up.

III-L-23 One Edge Motto or Design Struck Over Another (E), Rarity Level: 7, Values: \$300 up.

III-L-24 Flat Field Doubling (W), Rarity Level: 2-3, Values: \$1 to \$5.

III-L-25 Territorial Struck over Struck U.S. Coin: (I) Rarity Level: 6-7, Values: \$200 up.

III-L-26 Pattern Struck over Struck U.S. Coin: (I) Rarity Level: 6-7, Values: \$200 up.

III-L-27 Pattern Struck over Struck Pattern: (I) Rarity Level 6-7, Values: \$200 up.

III-L-28 Pattern Struck Over Foreign Coin: (I) Rarity Level 6-7, Values - \$200 up.

● COLLAR STRIKING VARIETIES (III-M)

The collar is often referred to as the "Third Die," and is involved in a number of forms of misstrikes. The collar normally rises around the planchet, preventing it from squeezing sideways between the dies and at the same time forming the reeding on reeded coins.

If the collar is out of position or tilted, a partial collar strike results; if completely missing, it causes a broadstrike; if the planchet is not entirely between the dies, an off-center strike.

III-M-1 Flanged Partial Collar Strike (WE), Rarity Level: 5-6, Values: \$20 up.

III-M-2 Reversed Flanged Partial Collar Strike (WE), Rarity Level: 6-7, Values: \$35 up.

III-M-3 Tilted Partial Collar Strike (WE), Rarity Level: 5-6, Values: \$20 up.

III-M-4 Centered Broadstrike (WE), Rarity Level: 5-6, Values: \$5 up.

III-L-3

III-L-3

III-L-4

III-M-5

III-M-8

III-M-5 Uncentered Broadstrike (WE),
Rarity Level: 5, Values: \$3 up.

III-M-6 Reversed Broadstrike (WE), Rarity
Level: 6, Values: \$10 up.

III-M-7 Struck Off-Center 10-30% (W),
Rarity Level: 3-6, Values: \$3 up.

III-M-8 Struck Off-Center 31-70% (W),
Rarity Level: 4-6, Values: \$5 up.

III-M-9 Struck Off-Center 71% or More
(W), Rarity Level: 3-5, Values: \$2 up.

III-M-10 Rotated Multi-sided Planchet
Strike (W), Rarity Level: 5-6, Values:
\$10 up.

III-M-11 Wire Edge Strike (IWE), Rarity
Level: 1-2, Values: No Extra Value.

III-M-12 Struck With the Collar Too High
(WE), Rarity Level: 6-7, Values: \$20 up.

III-M-13 Off-Center Slide Strike (W), Rarity
Level: 3-6 \$4 up.

● MISALIGNED AND ROTATED (DIE) STRIKE VARIETIES (III-N)

One (rarely both) of the dies may be Offset Misaligned, off to one side, or may be tilted (Vertically Misaligned). One die may either have been installed so that it is turned in relation to the other die, or may turn in the holder, or the shank may break allowing the die face to rotate in relation to the opposing die.

Vertical misaligned dies are rarely found, and like rotated dies, find only limited collector interest. Ninety and 180 degree rotations are the most popular. Rotations of 14 degrees or less have no value. The 1989-D Congress dollar is found with a nearly 180 degree rotated reverse, currently retailing for around \$2,000. Only about 30 have been reported to date.

III-N-1 Offset Die Misalignment Strike
(WE), Rarity Level: 3-5, Values: \$2 up.

III-N-2 Vertical Die Misalignment Strike
(WE), Rarity Level: 4-6, Values: \$1 up.

III-N-3 Rotated Die Strike - 15 to 45 Degrees
(IWE), Rarity Level: 4-6, Values: \$2 up.

III-N-4 Rotated Die Strike - 46 to 135
Degrees (IWE), Rarity Level: 5-6,
Values: \$10 up.

III-N-5 Rotated Die Strike - 136 to 180
Degrees (IWE), Rarity Level: 5-6,
Values: \$25 up.

● LETTERED AND DESIGN EDGE STRIKE VARIETIES (III-O)

Early U.S. coins and a number of foreign coins have either lettered edges, or designs on the edge of the coin. Malfunctions of the application of the motto or design to the edge fall in this section.

III-O-1 Overlapping Edge Motto or Design
(WE), Rarity Level: 3-4, Values: \$5 to
\$10 and up.

III-O-2 Wrong Edge Motto or Design (WE),
Rarity Level: 5-6-7, Values: \$50 up.

III-O-3 Missing Edge Motto, Design or
Security Edge (IWE), Rarity Level:
5-6-7, Values: \$50 up.

III-O-4 Jammed Edge Die Strike (W), Rarity
Level: 6, Values: \$10 up.

III-O-5 Misplaced Segment of an Edge Die
(E), Rarity Level: 4-7, Values: \$25 up.

III-O-6 Reeded Edge Struck Over a Lettered
Edge (IE), Rarity Level: 3-6, Values:
No Extra Value up.

● DEFECTIVE STRIKES AND MISMATCHED DIES (III-P)

The final section of the Striking Division covers coins which are not properly struck for reasons other than those in previous classes, such as coins struck with mismatched (muled) dies. The mismatched die varieties must be taken on a case by case basis, while the other classes presently have little collector demand or premium.

III-P-1 Defective Strike (WE), Rarity Level:
1, Values: No Extra Value.

III-P-2 Mismatched Die Strike (E), Rarity
Level: 4-7, Values: \$25 up.

III-P-3 Single-Strike Proof (WE), Rarity
Level: 4-5, Values: Minimal.

III-P-4 Single Die-Proof Strike (IE), Rarity
Level: 5-6, Values: \$100 up.

III-P-5 Reversed Die Strike (I), Rarity Level:
4-5, Values: No Extra Value to Minimal.

Official Mint modifications

DIVISION IV

Several mint produced varieties occur after the coin has been struck, resulting in the addition of the fourth division to my PDS System. Since most of these coins are either unique or are special varieties, each one must be taken on a case by case basis. All classes listed here are by definition intentional.

I have not listed values as the coins falling in these classes which are sold through regular numismatic channels, are cataloged with the regular issues or are covered in specialized catalogs in their particular area.

●MATTE PROOFS (IV-A)

Matte proofs as a section include several of the forms of proof coins which have the striking characteristics of a mirror proof but have been treated AFTER striking to give them a grainy, non-reflective surface.

IV-A-1 Matte Proof (I), Rarity Level: 3-5, Values: Normal Numismatic Value.

IV-A-2 Matte Proof on One Side (I), Rarity Level: 7, Values: Normal Numismatic Value.

IV-A-3 Sandblast Proof (I), Rarity Level: 4-6, Values: Normal Numismatic Value.

●ADDITIONAL ENGRAVING (IV-B)

This section includes any added markings which are placed on the struck coin and struck coins which later were cut into pieces for various purposes. The warning is repeated: Anything done to a coin after the strike is extremely difficult to authenticate and is much easier to fake than a die struck coin.

IV-B-1 Counterstamp and Countermark (I), Rarity Level: 3-6, Values: Normal Numismatic Value.

IV-B-2 Perforated and Cut Coins (I), Rarity Level: 4-6, Values: Normal Numismatic Value.

●RESTRIKES (IV-C)

Restrikes cover a complicated mixture of official use of dies from a variety of sources. Whether or not some were officially sanctioned is always a problem for the collector.

IV-C-1 Restrike on the Same Denomination Planchet (I), Rarity Level: 4-6, Values: Normal Numismatic Value.

IV-C-2 Restrike on a Different Denomination or Series Planchet (I), Rarity Level: 4-6, Values: Normal Numismatic Value.

IV-C-3 Restrike on a Foreign Coin (I), Rarity Level: 6-7, Values: Normal Numismatic Value.

IV-C-4 Restrike on a Token or Medal (I), Rarity Level: 5-6, Values: Normal Numismatic Value.

IV-C-5 Restruck With the Original Dies (I), Rarity Level: 4-6, Values: Normal Numismatic Value.

IV-C-6 Restruck With Mismatched Dies (I), Rarity Level: 4-6, Values: Normal Numismatic Value.

IV-C-7 Copy Strike With New Dies (I), Rarity Level: 3-5, Values: Normal Numismatic Value.

IV-C-8 Fantasy Strike (I), Rarity Level: 4-6, Values: Normal Numismatic Value.

After strike modifications

DIVISION V

This division includes both modifications that have value to collectors – and those that don't. I needed a couple of divisions to cover other things that happen to coins to aid in cataloging them. This avoids the false conclusion that an unlisted coin is quite rare, when the exact opposite is more likely to be the case.

●COLLECTIBLE MODIFICATIONS AFTER STRIKE (V-A)

This section includes those classes having to do with deliberate modifications of the coin done with a specific purpose or intent which makes them of some value to collectors. Quite often these pieces were made specifically to sell to collectors, or at least to the public under the guise of being collectible.

V-A-1 Screw Thaler, Rarity Level: 5-6, Values: Normal Numismatic Value.

V-A-2 Love Token, Rarity Level: 3-6, Values: \$10 up.

V-A-3 Satirical or Primitive Engraving, Rarity Level: 6-7, Values: \$5 up.

V-A-4 Elongated Coin, Rarity Level: 2-7, Values: 50 cents to \$1 and up.

V-A-5 Coin Jewelry, Rarity Level: 2-5, Values: \$1 up.

V-A-6 Novelty Coin, Rarity Level: 1-3, Values: No Value up to \$5 to \$10.

V-A-7 Toning, Rarity Level: 3-6, Values: No value up, depending on coloration. Easily faked.

V-A-8 Mint Modification, Rarity Level: 4-7, Values: \$5 up. Easily faked.

V-A-9 Mint Packaging Mistake, Rarity Level: 5-7, Values: Nominal \$1. Very easily faked.

● **ALTERATIONS AND DAMAGE AFTER THE STRIKE(V-B)**

This section includes those changes in a coin which have no collector value. In most cases their effect on the coin is to reduce or entirely eliminate any collector value - and in the case of counterfeits they are actually illegal to even own.

V-B-1 Machine Doubling Damage: NOTE: Machine doubling damage is defined as: "Damage to a coin after the strike, due to die bounce or chatter or die

displacement, showing on the struck coin as scrapes on the sides of the design elements, with portions of the coin metal in the relief elements either displaced sideways or downward, depending on the direction of movement of the loose die." Machine doubling damage, or MDD, is by far the most common form of doubling found on almost any coin in the world. Rarity Level: 0, Values: Reduces the coin's value.

V-B-2 Accidental or Deliberate Damage, Rarity Level: 0, Values: Reduces the coin's value.

V-B-3 Test Cut or Mark, Rarity Level: 0, Values: Reduces value of coin to face or bullion value.

V-B-4 Alteration, Rarity Level: 0, Values: Reduces value to face or bullion value.

V-B-5 Whizzing, Rarity Level: 0, Values: Reduces value sharply and may reduce it to face or bullion value.

V-B-6 Counterfeit, Copy, Facsimile, Forgery or Fake, Rarity Level: 0, Values: No Value and may be illegal to own.

V-B-7 Planchet Deterioration. Very common on copper-plated zinc cents. Rarity level: 0, Values: No Value.

4 American Coin History

U.S. Mint founded in 1792

At peak production, the U.S. Mint strikes nearly 30 billion coins a year. Who would have thought it possible at its founding? In July 1792, a site for the new U.S. Mint not yet having been secured, 1,500 silver half dismes were struck on a small screw press in the cellar of a Philadelphia building owned by sawmaker John Harper. Though some have since categorized these early emissions of the fledgling U.S. Mint as patterns, it is clear that first President George Washington – who is said to have deposited the silver from which the coins were struck – considered this small batch of half dismes to be the first official U.S. coins.

The law establishing the Mint dates to April 2, 1792. From that early legislative birth has flowed the coins that have underpinned the workings of U.S. commerce for over two centuries. It must be remembered that the Mint was born in chaos. It was a time shortly after the

Revolutionary War and as hard as it was to win independence from Great Britain, setting up American government finances on a sound basis was to prove almost as daunting.

At first a cumbersome system was proposed by Robert Morris, a Revolutionary War financier and first superintendent of finance. Refinements tendered by Thomas Jefferson and Alexander Hamilton then firmly placed the nation on an easily understood decimal system of coinage. They were working with a hodgepodge system that grew up in the Colonial period.

Despite a dire need for coinage in the Colonies, Great Britain considered it a royal right and granted franchises sparingly. Much of the Colonial economy, therefore, revolved around barter, with food staples, crops, and goods serving as currency. Indian wampum or bead money also was used, first in the fur trade and later as a form of money for Colonial use.

Copper pieces were produced around 1616 for Sommer Islands (now Bermuda), but coinage within the American Colonies apparently didn't begin until 1652, when John Hull struck silver threepence, sixpence and shillings under authority of the General Court of Massachusetts. This coinage continued, with design changes (willow, oak, and pine trees), through 1682. Most of the coins were dated 1652, apparently to avoid legal problems with England.

In 1658 Cecil Calvert, second Lord Baltimore, commissioned coins to be struck in England for use in Maryland. Other authorized and unauthorized coinages – including those of Mark Newby, John Holt, William Wood, and Dr. Samuel Higley – all became part of the landscape of circulating coins. In the 1780s there were influxes of counterfeit British halfpence and various state coinages.

The Articles of Confederation had granted individual states the right to produce copper coins. Many states found this to be appealing, and merchants in the mid-1780s traded copper coins of Vermont, Connecticut, Massachusetts, New Jersey, and New York. Not all were legal issues; various entrepreneurs used this as an invitation to strike imitation state coppers and British halfpence. Mutilated and worn foreign coins also circulated in abundance. Included among these were coins of Portugal, Great Britain, and France, with the large majority of the silver arriving from Spain.

The accounting system used by the states was derived from the British system of pounds, shillings, and pence. Each state was allowed to set its own rates at which foreign gold and silver coins would trade in relation to the British pound.

In 1782 Robert Morris, newly named superintendent of finance, was appointed to head a committee to determine the values and weights of the gold and silver coins in circulation. Asked simply to draw up a table of values, Morris took the opportunity to propose the establishment of a federal mint. In his Jan. 15, 1782, report (largely prepared by his assistant, Gouverneur Morris), Morris noted that the exchange rates between the states were complicated.

He observed that a farmer in New Hampshire would be hard-pressed if asked to determine the value of a bushel of wheat in South Carolina. Morris recorded that an amount of wheat worth four shillings in his home state of New Hampshire would be worth 21 shillings and eightpence under the accounting system used in South Carolina.

Morris claimed these difficulties plagued not only farmers, but that "they are perplexing to most Men and troublesome to all." Morris further pressed for the adoption of an American coin to solve the problems of the need for small change and debased foreign coinages in circulation.

In essence, what he was advocating was a monometallic system based on silver.

He said that gold and silver had fluctuated throughout history. Because these fluctuations resulted in the more valuable metal leaving the country, any nation that adopted a bimetallic coinage was doomed to have its gold or silver coins disappear from circulation.

Gouverneur Morris calculated the rate at which the Spanish dollar traded to the British pound in the various states. Leaving out South Carolina, because it threw off his calculations, Gouverneur Morris arrived at a common denominator of 1,440. Robert Morris, therefore, recommended a unit of value of $1/1,440$, equivalent to a quarter grain of silver. He suggested the striking of a silver 100-unit coin, or cent; a silver 500-unit coin, or quint; a silver 1,000-unit coin, or mark; and two copper coins, one of eight units and the other of five units.

On Feb. 21, 1782, the Grand Committee of Congress approved the proposal and directed Morris to press forward and report with a plan to establish a mint. Morris had already done so. Apparently feeling confident that Congress would like his coinage ideas, Morris (as shown by his diary) began efforts at the physical establishment prior to his January 1782 report. He had already engaged Benjamin Dudley to acquire necessary equipment for the mint and hoped to have sample coins available to submit with his original report to Congress.

It wasn't until April 23, 1783, that Morris was able to send his Nova Constellatio patterns to Congress and suggest that he was ready to report on establishing a mint. Apparently nothing came of Morris' efforts. Several committees looked into the matter, but nothing was accomplished. Dudley was eventually discharged as Morris' hopes dimmed.

Thomas Jefferson was the next to offer a major plan. Jefferson liked the idea of a decimal system of coinage, but disliked Morris' basic unit of value. As chairman of the Currency Committee, Jefferson reviewed Morris' plan and formulated his own ideas.

To test public reaction, Jefferson gave his "Notes on Coinage" to *The Providence Gazette*, and *Country Journal*, which published his plan in its July 24, 1784, issue. Jefferson disagreed with Morris' suggestion for a $1/1,440$ unit of value and instead proposed a decimal coinage based on the dollar, with the lowest unit of account being the mil, or $1/1,000$.

"The most easy ratio of multiplication and division is that by ten," Jefferson wrote. "Every one knows the facility of Decimal Arithmetic."

Jefferson argued that although Morris' unit would have eliminated the unwanted fraction that occurred when merchants converted British farthings to dollars, this was of little significance. After all, the original idea of establishing a mint was to get rid of foreign currencies.

Morris' unit, Jefferson said, was too cumbersome for use in normal business transactions. According to Jefferson, under Morris' plan a horse valued at 80 Spanish dollars would require a notation of six figures and would be shown as 115,200 units.

Jefferson's coinage plan suggested the striking of a dollar, or unit; half dollar, or five-tenths; a double tenth, or fifth of a dollar, equivalent to a pistareen; a tenth, equivalent to a Spanish bit; and a one-fifth copper coin, relating to the British farthing. He also wanted a gold coin of \$10, corresponding to the British double guinea; and a copper one-hundredth coin, relating to the British halfpence.

In reference to his coinage denominations, Jefferson said, it was important that the coins "coincide in value with some of the known coins so nearly, that the people may by quick reference in the mind, estimate their value." The Spanish dollar was the most commonly used coin in trade, so it was natural basis for the new U.S. silver dollar. In the Spanish system, the coin was called an eight reales, or piece of eight.

More than a year, however, passed without any further action on his plan or that proposed by Morris. In a letter to William Grayson, a member of the Continental Congress, Washington expressed concern for the establishment of a national coinage system, terming it "indispensably necessary." Washington also complained of the coinage in circulation: "A man must travel with a pair of scales in his pocket, or run the risk of receiving gold at one-fourth less than it counts."

On May 13, 1785, the 13-member Grand Committee, to whom Jefferson's plan had been submitted, filed its report, generally favoring Jefferson's coinage system. The committee did, however, make slight alterations, including the elimination of the gold \$10 coin, the addition of a gold \$5 coin, and the dropping of Jefferson's double tenth, which it replaced with a quarter dollar. The committee also added a coin equal to 1/200 of a dollar (half cent). On July 6, 1785, Congress unanimously approved the Grand Committee's plan. It failed, however, to set a standard weight for the silver dollar or to order plans drawn up for a mint.

Several proposals were offered for a contract coinage. On April 21, 1787, the board accepted a proposal by James Jarvis to strike 300 tons of copper coin at the federal standard. Jarvis, however, delivered slightly less than 9,000 pounds of his contract. The contract was voided the following year for his failure to meet scheduled delivery times, but helped to delay further action on a mint. Concerted action on a coinage system and a mint would wait until the formation of the new government.

Alexander Hamilton, named in September 1789 to head the new Treasury, offered three different methods by which the new nation could achieve economic stability, including the funding of the national debt, establishment of the Bank of North America and the founding of the U.S. Mint. On Jan. 21, 1791, Hamilton submitted to Congress a "Report on the Establishment of a Mint."

Hamilton agreed with Jefferson that the dollar seemed to be best suited to serve as the basic unit, but believed it necessary to establish a proper weight and fineness for the new coin. To do so, Hamilton had several Spanish coins assayed to determine the fine weight of the Spanish dollar. He also watched the rate at which Spanish dollars traded for fine gold (24 3/4 grains per dollar) on the world market.

From his assays and observations he determined that the Spanish dollar contained 371 grains of silver. He then multiplied 24 3/4 by 15 (the gold value of silver times his suggested bimetallic ratio) and arrived at 371 1/4 as the proper fine silver weight for the new silver dollar.

The Spanish dollar actually contained 376 grains of pure silver when new, 4 3/4

grains more than Hamilton's proposed silver dollar.

Hamilton also wanted a bimetallic ratio of 15-to-1. Hamilton said his ratio was closer to Great Britain's, which would be important for trade, and Holland's, which would be important for repaying loans from that country.

His report suggested the striking of a gold \$10; gold dollar; silver dollar; silver tenth, or disme; and copper one-hundredth and half-hundredth. Hamilton felt the last of these, the half cent, was necessary because it would enable merchants to lower their prices, which would help the poor.

Congress passed the act establishing the U.S. Mint April 2, 1792. It reinstated several coin denominations left out by Hamilton and dropped his gold dollar. In gold, the act authorized at \$10 coin, or "eagle"; a \$5 coin, or "half eagle"; and a \$2.50 coin, or "quarter eagle." In silver were to be a dollar, half dollar, quarter dollar, disme, and half disme, and in copper a cent and half cent.

Though it established a sound system of U.S. coinage, the act failed to address the problem of foreign coins in circulation. It was amended in February 1793 to cancel their legal-tender status within three years of the mint's opening.

Coinage totals at the first mint in Philadelphia were understandably low. Skilled coiners, assayers and others who could handle the mint's daily operations were in short supply in the United States. Also in want were adequate equipment and supplies of metal for coinage. Much of the former had to be built or imported. Much of the latter was also imported or salvaged from various domestic sources, including previously struck tokens and coins, and scrap metal.

Coinage began in earnest in 1793 with the striking of half cents and cents at the new mint located at Seventh Street between Market and Arch streets in Philadelphia. Silver coinage followed in 1794, with half dimes, half dollars, and dollars. Gold coinage did not begin until 1795 with the minting of the first \$5 and \$10 coins. Silver dimes and quarters and gold \$2.50 coins did not appear until 1796.

Under the bimetallic system of coinage by which gold and silver served as equal representations of the unit of value, much of the success and failure of the nation's coinage to enter and remain in circulation revolved around the supply and valuation of precious metals. From the Mint's beginning, slight miscalculations in the proper weight for the silver dollar and a proper bimetallic ratio led gold and silver to disappear from circulation. The U.S. silver dollar traded at par with Spanish and Mexican dollars, but because the U.S. coin was lighter, it was doomed to be exported.

A depositor at the first mint could make a profit at the mint's expense by sending the coins to the West Indies. There they could be traded at par for the heavier Spanish or Mexican eight reales, which were then shipped back to the United States for recoinage. As a result, few early silver dollars entered domestic circulation; most failed to escape the melting pots.

Gold fared no better. Calculations of the bimetallic ratio by which silver traded for gold on the world market were also askew at first and were always subject to fluctuations. Gold coins either disappeared quickly after minting or never entered circulation,

languishing in bank vaults. These problems led President Jefferson to halt coinage of the gold \$10 and the silver dollar in 1804.

The gold \$10 reappeared in 1838 at a new, lower weight standard. The silver dollar, not coined for circulation since 1803, returned in 1836 with a limited mintage. Full-scale coinage waited until 1840.

Nor was the coinage of copper an easy matter for the first mint. Severe shortages of the metal led the mint to explore various avenues of obtaining sufficient supplies for striking cents and half cents.

Witness, for example, the half-cent issues of 1795 and 1797 struck over privately issued tokens of the New York firm of Talbot, Allum & Lee because of a shortage of copper for the federal issue. Rising copper prices and continued shortages forced the mint to lower the cent's weight from 208 grains to 168 grains in 1795.

In 1798, because of the coinage shortage, the legal-tender status of foreign coins was restored. Several more extensions were given during the 1800s, ending with the withdrawal of legal-tender status for Spanish coins in 1857.

A new law made the mint lower the standard weight of all gold coins in 1834. This reflected market conditions and in effect recognized a higher gold price when bought with silver coins. For example, \$5 in silver coins bought a new, lighter \$5 gold piece, meaning the buyer got less gold. This led to the melting of great numbers of the older, heavier gold coins as speculators grabbed a 4.7 percent profit.

By the 1850s discovery of gold in California made silver more expensive in terms of gold. All silver quickly disappeared from circulation. Congress reacted in 1853 by lowering the weight of the silver half dime, dime, quarter, and half dollar, hoping to keep silver in circulation. A new gold coin of \$20 value, the "double eagle," was introduced to absorb a great amount of the gold from Western mines.

Not long after, silver was discovered in Nevada. By the mid-1870s the various mines that made up what was known as the Comstock Lode (named after its colorful early proprietor, Henry P. Comstock) had hit the mother lode. Large supplies of silver from the Comstock, combined with European demonetization, caused a severe drop in its value. Silver coins were made heavier as a result in 1873.

Also, it was believed that the introduction of a heavier, 420-grain silver dollar in 1873, known as the Trade dollar, would create a market for much of the Comstock silver, bolster its price, and at the same time wrest control from Great Britain of lucrative trade with the Orient. It didn't. Large numbers of Trade dollars eventually flooded back into the United States. They were demonetized in 1887.

Morgan dollars were introduced in 1878 as a panacea to the severe economic problems following the Civil War. Those who proudly carried the banner of free silver contended that by taking the rich output of the Comstock mines and turning it into silver dollars, a cheaper, more plentiful form of money would become available. This was supposed to give the economy a boost.

The Free Silver Movement reached its peak in 1896 when William Jennings Bryan attempted to gain the White House on a plank largely based on restoration of the free

and unlimited coinage of the standard 412.5-grain silver dollar. He failed. Silver failed. In 1900 the United States officially adopted a gold standard.

Silver continued to be a primary coinage metal until 1964, when rising prices led the Mint to remove it from the dime and quarter. Mintage of the silver dollar had ended in 1935. The half dollar continued to be coined through 1970 with a 40 percent silver composition. It, too, was then made of copper-nickel clad metal.

Gold coinage ended in 1933 and exists today only in commemorative issues and American Eagle bullion coins with fictive face values. A clad composition of copper and nickel is now the primary coinage metal. Even the cent is no longer all copper; a copper-coated zinc composition has been used since 1982.

Precious-metal supplies were also linked to the opening of additional mints, which served the parent facility in Philadelphia. The impact of gold discoveries in the 1820s in the southern Appalachian Mountains was directly tied to the construction of branch mints in Dahlonega, Ga., and Charlotte, N.C., in 1838. These new mints struck only gold coins. New Orleans also became the site of a branch mint in the same year as Dahlonega and Charlotte. It took in some of the outflow of gold from Southern mines, but also struck silver coins.

Discovery of gold in California in the late 1840s created a gold rush, and from it sprang a great western migration. Private issues of gold coinage, often of debased quality, were prevalent, and the cost of shipping the metal eastward for coinage at Philadelphia was high. A call for an official branch mint was soon heard and heeded in 1852 with the authorization of the San Francisco Mint, which began taking deposits in 1854.

The discovery of silver in the Comstock Lode led to yet another mint. Located only a short distance via Virginia & Truckee Railroad from the fabulous Comstock Lode, the Carson City mint began receiving bullion in early 1870.

Denver, also located in a mineral-rich region, became the site of an assay office in 1863 when the government purchased the Clark, Gruber & Co. private mint. It became a U.S. branch mint in 1906. Now four mints exist. They are in Denver, Philadelphia, San Francisco and West Point, N.Y. The latter strikes current precious metal coinage for collectors and investors.

5 How Are Coins Made?

Mints are really factories

Copper, nickel, silver, and gold are pretty much the basic coin metals for the United States. When mixed with tin, copper becomes bronze, and this alloy was used in cents. Current cents have a pure zinc core. There have been patterns made of aluminum, but these never were issued for use in circulation. Platinum joined gold and silver as a precious metal used in U.S. coinage starting in 1997.

There are three basic parts of the minting process: (1) the making of the planchet, which is divided into the selection and processing of the metal and the preparation of the planchets, (2) the making of the dies, and (3) the use of the dies to strike the planchets. To help you remember these three parts, think of “P,” “D,” and “S” for planchet, die, and striking.

Making the ‘blanks’

The piece of metal that becomes a coin is known as a “blank.” This is a usually round, flat piece that has been punched or cut from a sheet or strip of coin metal.

Before a blank can become a coin it has to be processed, cleaned, softened, and given what is known as an “upset edge” – a raised ridge or rim around both sides. The blank then becomes a “planchet” and is ready to be struck into a coin by the dies. First they go through what looks like a monstrous cement mixer. A huge cylinder revolves slowly as the planchets are fed in at one end and spiral their way through. This is an annealing oven, which heats the planchets to soften them. When they come out the end, they fall into a bath where they are cleaned with a diluted acid or soap solution. As the final step, they go through the upsetting mill, the machine that puts the raised rim on the blank and turns it into a planchet, ready to be struck. In a different department the process of making the dies used to strike the coins has already begun.

Preparing the dies

For those who haven’t studied metallurgy, the concept of hard metal flowing about is pretty hard to swallow, but this is actually what happens. It is basically the same process as the one used in an auto plant to turn a flat sheet of steel into a fender with multiple curves and sharp bends. The cold metal is moved about by the pressure applied.

To make the metal move into the desired design, there has to be a die. Actually, there have to be two dies, because one of the laws of physics is that for every action there has to be an equal and opposite reaction. You cannot hold a piece of metal in midair and strike one side of it. Instead you make two dies, fix one, and drive the other one against it – with a piece of metal in between to accept the design from each die.

A die is a piece of hard metal, like steel, with a design on its face that helps to form a mirror image on the struck coin. Early dies were made by hand. Engravers used hand tools, laboriously cutting each letter, each digit, and each owl or eagle or whatever design was being used into the face of the die. Notice that this is “into” the surface of the die. Each part of the die design is a hole or cavity of varying shape and depth.

This is because we want a mirror image on the coin, but we want it raised, or in “relief.” To make a relief image on a coin, the image on the die has to be recessed into the face of the die, or “incuse.” Of course, if we want an incuse image on the coin, such as the gold \$2.50 and \$5 coins of 1908-1929, the design on the die face would have to be in relief.

To fully understand this, take a coin from your pocket and a piece of aluminum foil. Press the foil down over the coin design and rub it with an eraser. When you take the foil off and look at the side that was in contact with the coin, you have a perfect copy of a die. Everywhere there is a relief design on the coin there is an incuse design on your foil “die.”

From sketchbook to coin

The design process begins with an artist’s sketch. This is translated into a three-dimensional relief design that is hand-carved from plaster or, in recent years, from a form of plastic.

The plaster or plastic design is then transformed into a “galvano,” which is an exact copy of the design that has been plated with a thin layer of copper. This is used as a template or pattern in a reducing lathe, which cuts the design into a die blank.

This die becomes the master die, from which all of the following steps descend. The process can be reversed so that the designs will be cut in relief, forming a tool called a “hub,” which is simply a piece of steel with the design in relief, exactly the same as the relief design on the intended coin.

To make working dies, pieces of special steel are prepared, with one end shaped with a slight cone. The die blank is softened by heating it. Then the hub is forced into the face of the die, forming the incuse, mirror-image design in the face of the die.

The process usually has to be repeated because the die metal will harden from the

A galvano of the 1976 half dollar goes on the reducing lathe.

pressure. The die is removed, softened, and returned to the hubbing press for a second impression from the hub. As you can imagine, it takes several hundred tons per square inch to force the hub into the die. Logically, this process is called “hubbing” a die.

The advantage of hubbing a die is that thousands of working dies can be made from a single hub, each one for all practical purposes as identical as the proverbial peas in a pod. This enables, for example, U.S. mints to strike billions of one-cent coins each year, each with the identical design.

Die making has come a long way from the early days. Philadelphia used to make all dies and then shipped them to the branch mints. Now Denver has its own die shop and creates dies of its own.

Striking the coin

Yesterday’s die might strike only a few hundred coins. Today it is not unusual for a die to strike well over a million coins.

The coin press used to strike modern coins is a complicated piece of equipment that consists basically of a feed system to place the planchets in position for the stroke of the hammer die to form a coin. This process takes only a fraction of a second, so the press has to operate precisely to spew out the hundreds of coins that are struck every minute.

The end of the early hammered coinage came with the introduction of the collar, which often is called the “third” die. The collar is nothing more than a steel plate with a hole in it. This hole is the exact diameter of the intended coin and often is lined with carbide to prolong its life. It surrounds the lower, or fixed, die. Its sole purpose is to contain the coin metal to keep it from spreading too far sideways under the force of the strike.

If the intended coin has serrations, or “reeds,” on the edge, then the collar has the matching design. The strike forces the coin metal against the serrations in the collar, forming the reeded edge at the same time that the two dies form the front and back, or obverse and reverse, of the coin.

Lettered-edge coins are produced usually by running the planchets through an edge-lettering die, or by using a segmented collar that is forced against the edge of the planchet during the strike by hydraulic pressure.

Several hundred tons were required to drive a hub into a die. Not as much but still significant amounts of force are needed to strike coins. A cent requires about 30 tons per square inch. A silver dollar took 150 tons. Other denominations fall between.

Modern coin presses apply pressure in a variety of ways. A ram, carrying the moving or “hammer” die, is forced against the planchet. Most commonly this is with the mechanical advantage of a “knuckle” or connected pieces to which pressure is applied from

A binful of blanks are ready for the coin press.

the side. When the joint straightens – like straightening your finger – the ram at the end of the piece is driven into the planchet. Once the strike is complete, at the final impact of the die pair, the coin has been produced. It is officially a coin now, and it's complete and ready to be spent.

Making proof coins

Proof coins started out as special presentation pieces. They were and still are struck on specially prepared planchets with specially prepared dies. Today the definition of a proof coin also requires that it be struck two or more times.

Currently all proof versions of circulating U.S. coins are struck at the San Francisco Mint, but some of the proof commemorative coins have been struck at the other mints. West Point currently strikes proof American Eagles of silver, gold, and platinum, and they carry a "W" mintmark.

After the proof blanks are punched from the strip, they go through the annealing oven, but on a conveyor belt rather than being tumbled in the revolving drum. After cleaning and upsetting they go into a huge vibrating machine where they are mixed with steel pellets that look like tiny footballs. The movement of the steel pellets against the planchets burnishes, or smooths, the surface so any scratches and gouges the planchets pick up during processing are smoothed over.

Proof dies get an extra polishing before the hubbing process. They are made at Philadelphia and shipped to the branch mints. When the proof dies arrive at San Francisco, they are worked on by a team of specialists who use diamond dust and other polishing agents to turn the fields of the proof dies into mirrorlike surfaces. The incuse design is sandblasted to make the surface rough, producing what is known as a "frosted" design. Because collectors like the frosted proofs, the design is periodically swabbed with acid to keep the surface rough and increase the number of frosted proofs from each die. This process has been around about a quarter century, so frosted examples of earlier proofs are considerably scarcer.

The presses that strike proof coins usually are hand-operated rather than automatic. Some of the newer presses use equipment such as vacuum suction devices to pick up the planchets, place them in the coining chamber, and then remove the struck coins. This avoids handling the pieces any more than necessary.

On a hand-operated press, the operator takes a freshly washed and dried planchet and, using tongs, places it in the collar. The ram with the die descends two or more times before the finished coin is removed from the collar and carefully stored in a box for transport to storage or the packaging line. After each strike the operator wipes the dies to make sure that lint or other particles don't stick to the dies and damage the coins as they are struck.

Proof dies are used for only a short time. Maximum die life is usually less than 10,000 coins, varying with the size of the coin and the alloy being struck.

KM# 201 • 3.11 g., Brass, 19 mm. • **Rev. Designer:**

Frank Gasparro **Note:** MS60 prices are for brown coins and MS65 prices are for coins that are at least 90% original red. The dates were modified in 1960, 1970 and 1982, resulting in large-date and small-date varieties for those years. The 1972 "doubled die" shows doubling of IN GOD WE TRUST. The 1979-S and 1981-S Type II proofs have a clearer mint mark than the Type I proofs of those years. Some 1982 cents have the predominantly copper composition; others have the predominantly zinc composition. They can be distinguished by weight.

American Bison standing on a line.

KM# 134 • 5.00 g., Copper-Nickel, 21.2 mm. • Designer: James Earle Fraser Note: In 1913 the reverse design was modified so the ground under the buffalo was represented as a line rather than a mound. On the 1937D 3-legged variety, the buffalo's right front leg is missing, the result of a damaged die.

1918/17D

1937D 3-legged

Liberty Cap Quarter

Draped bust left, flanked by stars, date below. Eagle with arrows in talons, banner above, value below.

KM# 44 • 6.74 g., 0.892 Silver 0.1933 oz. ASW, 27 mm. • **Rev. Legend:** UNITED STATES OF AMERICA **Designer:** John Reich **Note:** Varieties of the 1819 strikes are distinguished by the size of the 9 in the date. Varieties of the 1820 strikes are distinguished by the size of the 0 in the date. One 1822 variety and one 1828 variety have "25" engraved over "50" in the denomination. The 1827 restrikes were produced privately using dies sold as scrap by the U.S. Mint.

Draped bust right, flanked by stars, date at angle below. Heraldic eagle.

KM# 35 • 13.48 g., 0.892 Silver 0.3866 oz. ASW, 32.5 mm. • **Obv. Legend:** LIBERTY **Rev. Legend:** UNITED STATES OF AMERICA **Designer:** Robert Scot **Note:** The two varieties of the 1803 strikes are distinguished by the size of the 3 in the date. The several varieties of the 1806 strikes are distinguished by the style of 6 in the date, size of the stars on the obverse, and whether the stem of the olive branch held by the reverse eagle extends through the claw.

Date	Mintage	G4	VG8	F12	VF20	XF40	MS60

Capped Bust

Draped bust left, flanked by stars, date at angle below. "50 C." below eagle.

KM# 37 • 13.48 g., 0.892 Silver 0.3866 oz. ASW, 32.5 mm. • **Rev. Legend:** UNITED STATES OF AMERICA **Designer:** John Reich **Note:** There are three varieties of the 1807 strikes. Two are distinguished by the size of the stars on the obverse. The third was struck from a reverse die that had a 5 cut over a 2 in the "50C" denomination. Two varieties of the 1811 are distinguished by the size of the 8 in the date. A third has a period between the 8 and second 1 in the date. One variety of the 1817 has a period between the 1 and 7 in the date. Two varieties of the 1820 are distinguished by the size of the date. On the 1823 varieties, the "broken 3" appears to be almost separated in the middle of the 3 in the date; the "patched 3" has the error repaired; the "ugly 3" has portions of its detail missing. The 1827 "curled-2" and "square-2" varieties are distinguished by the numeral's base -- either curled or square. Among the 1828 varieties, "knobbed 2" and "no knob" refers to whether the upper left serif of the digit is rounded. The 1830 varieties are distinguished by the size of the 0 in the date. The four 1834 varieties are distinguished by the sizes of the stars, date and letters in the inscriptions. The 1836 "50/00" variety was struck from a reverse die that has "50" recut over "00" in the denomination.

Walking Liberty Half Dollar

Liberty walking left wearing U.S. flag gown, sunrise at left. Eagle advancing left.

KM# 142 • 12.50 g., 0.900 Silver 0.3617 oz. ASW, 30.6 mm. • **Designer:** Adolph A. Weinman **Note:** The mint mark appears on the obverse below the word "Trust" on 1916 and some 1917 issues. Starting with some 1917 issues and continuing through the remainder of the series, the mint mark was changed to the reverse, at about the 8 o'clock position near the rim.

Obverse mint mark
1916-1917

Reverse mint mark
1917-1947

Draped bust right, flanked by stars, date below. Heraldic eagle.

KM# 32 • 26.96 g., 0.892 Silver 0.7732 oz. ASW, 39-40 mm. • **Obv. Legend:** LIBERTY **Rev. Legend:** UNITED STATES OF AMERICA **Designer:** Robert Scot **Note:** The 1798 “knob 9” variety has a serif on the lower left of the 9 in the date. The 1798 varieties are distinguished by the number of arrows held by the eagle on the reverse and the number of berries on the olive branch. On the 1798 “high-8” variety, the 8 in the date is higher than the other numerals. The 1799 varieties are distinguished by the number and positioning of the stars on the obverse and by the size of the berries in the olive branch on the reverse. On the 1700 “irregular date” variety, the first 9 in the date is smaller than the other numerals. Some varieties of the 1800 strikes had letters in the legend cut twice into the dies; as between the numerals in the date are wider than other varieties and the 8 is lower than the other numerals. The 1800 “small berries” variety refers to the size of the berries in the olive branch on the reverse. The 1800 “12 arrows” and “10 arrows” varieties refer to the number of arrows held by the eagle. The 1800 “Americai” variety appears to have the faint outline of an “I” after “America” in the reverse legend. The “close” and “wide” varieties of the 1802 refer to the amount of space between the numerals in the date. The 1800 large-3 and small-3 varieties are distinguished by the size of the 3 in the date.

Morgan Dollar
Laureate head left, date below flanked by stars. Eagle within 1/2 wreath.

KM# 110 • 26.73 g., 0.900 Silver 0.7734 oz. ASW, 38.1 mm. • **Obv. Legend:** E • **PLURIBUS** • **UNUM** **Rev.** **Legend:** UNITED STATES OF AMERICA **Designer:** George T. Morgan **Note:** “65DMPL” values are for coins grading MS-65 deep-mirror prooflike. The 1878 “8 tail feathers” and “7 tail feathers” varieties are distinguished by the number of feathers in the eagle’s tail. On the “reverse of 1878” varieties, the top of the top feather in the arrows held by the eagle is straight across and the eagle’s breast is concave. On the “reverse of 1879 varieties,” the top feather in the arrows held by the eagle is slanted and the eagle’s breast is convex. The 1890-CC “tail-bar” variety has a bar extending from the arrow feathers to the wreath on the reverse, the result of a die gouge. The Pittman Act of 1918 authorized the melting of 270 Million pieces of various dates. They were not individually recorded.

Coronet Head

Coronet head, left, within circle of stars. No motto above eagle.

KM# 69 • 8.36 g., 0.900 Gold 0.2419 oz. AGW, 21.6 mm. • **Rev. Legend:** UNITED STATES OF AMERICA
Designer: Christian Gobrecht **Note:** Varieties for 1843 are distinguished by the size of the numerals in the date. One 1848 variety has "Cal." inscribed on the reverse, indicating it was made from California gold. The 1873 "closed-3" and "open-3" varieties are distinguished by the amount of space between the upper left and lower left serifs in the 3 in the date.

1907 extremely high relief, unique

1907 extremely high relief, lettered edge

Note: 1907 extremely high relief, lettered edge, Prf-68, private sale, 1990, \$1,500,000.

COMMEMORATIVE COINAGE

1892-1954

All commemorative half dollars of 1892-1954 have the following specifications: diameter — 30.6 millimeters; weight — 12.500 grams; composition — 0.900 silver, 0.3617 ounces actual silver weight. Values for PDS sets contain one example each from the Philadelphia, Denver and San Francisco mints. Type coin prices are the most inexpensive single coin available from the date and mint mark combinations listed.

COMMEMORATIVE COINAGE 1982-PRESENT

All commemorative silver dollar coins of 1982-present have the following specification: diameter - 38.1 millimeters; weight - 26.730 grams; composition - 0.900 silver, 0.7736 ounces actual silver weight. All commemorative \$5 coins of 1982-present have the following specifications: diameter - 21.6 millimeters; weight - 8.359 grams; composition: 0.900 gold, 0.242 ounces actual gold weight.

Note: In 1982, after a hiatus of nearly 30 years, coinage of commemorative half dollars resumed. Those designated with a "W" were struck at the West Point Mint. Some issues were struck in copper-nickel. Those struck in silver have the same size, weight and composition as the prior commemorative half-dollar series.

MINT SETS

Mint, or uncirculated, sets contain one uncirculated coin of each denomination from each mint produced for circulation that year. Values listed here are only for those sets sold by the U.S. Mint. Sets were not offered in years not listed. In years when the Mint did not offer the sets, some private companies compiled and marketed uncirculated sets. Mint sets from 1947 through 1958 contained two examples of each coin mounted in cardboard holders, which caused the coins to tarnish. Beginning in 1959, the sets have been packaged in sealed Pliofilm packets and include only one specimen of each coin struck for that year (both P & D mints). Listings for 1965, 1966 and 1967 are for "special mint sets," which were of higher quality than regular mint sets and were prooflike. They were packaged in plastic cases. The 1970 large-date and small-date varieties are distinguished by the size of the date on the coin. The 1976 three-piece set contains the quarter, half dollar and dollar with the Bicentennial design. The 1971 and 1972 sets do not include a dollar coin; the 1979 set does not include an S-mint-marked dollar. Mint sets issued prior to 1959 were double sets (containing two of each coin) packaged in cardboard with a paper overlay. Original sets will always be toned and can bring large premiums if nicely preserved with good color.

Louis Braille

Date	Price
2009 Braille Education set, KM#455	43.50

PROOF SETS

Proof coins are produced through a special process involving specially selected, highly polished planchets and dies. They usually receive two strikings from the coin press at increased pressure. The result is a coin with mirrorlike surfaces and, in recent years, a cameo effect on its raised design surfaces. Proof sets have been sold off and on by the U.S. Mint since 1858. Listings here are for sets from what is commonly called the modern era, since 1936. Values for earlier proofs are included in regular date listings. Sets were not offered in years not listed. Since 1968, proof coins have been produced at the San Francisco Mint; before that they were produced at the Philadelphia Mint. In 1942 the five-cent coin was struck in two compositions. Some proof sets for that year contain only one type (five-coin set); others contain both types. Two types of packaging were used in 1955 -- a box and a flat, plastic holder. The 1960 large-date and small-date sets are distinguished by the size of the date on the cent. Some 1968 sets are missing the mint mark on the dime, the result of an error in the preparation of an obverse die. The 1970 large-date and small-date sets are distinguished by the size of the date on the cent. Some 1970 sets are missing the mint mark on the dime, the result of an error in the preparation of an obverse die. Some 1971 sets are missing the mint mark on the five-cent piece, the result of an error in the preparation of an obverse die. The 1976 three-piece set contains the quarter, half dollar and dollar with the Bicentennial designs. The 1979 and 1981 Type II sets have clearer mint marks than the Type I sets for those years. Some 1983 sets are missing the mint mark on the dime, the result of an error in the preparation of an obverse die. Prestige sets contain the five regular-issue coins plus a commemorative silver dollar from that year. Sets issued prior to 1956 came in transparent envelopes stapled together in a small square box. In mid 1955 sets were changed to a flat clear cellophane envelope. In 1968 sets were changed to a clear hard plastic case as they still are currently issued.

COLONIAL AMERICA

North America was initially explored by the Vikings, but it was not until the age of Discovery, that active and expansive colonization began. The French, Spanish, Dutch, English and Portuguese were all involved in colonizing North, Central and South America.

The Spanish were strongest in Central and South America, taking that whole continent except for Brazil, which went to Portugal. Their expansion also spread into what became modern day Florida, Texas, and California.

The French settled in the Mississippi River Delta, from New Orleans northward to St. Louis, then east to the Ohio River basin, and west to the Rockies; they also progressed to the north, in the St. Lawrence River area in Canada; Quebec and Montreal being their principal cities.

The Dutch had a presence from the 1620's through 1664, mainly in the New York region, but lost that territory to the English, and never again gained a stronghold on the mainland during this period.

The English settled on the East Coast of the United States, from Georgia north to what later became Maine, and east of the Allegheny and Appalachian Mountains. To the north in Canada, they worked their way into Nova Scotia, Newfoundland, and north of the French in Quebec, Ontario, and with the explorers of the Hudson Bay Company, westward on the plains to the Pacific North West.

On the basis of the voyage of John Cabot to the North American mainland in 1497, England initially claimed the entire continent. The first permanent English settlement was established at Jamestown, Va., in 1607. France and Spain had also claimed extensive territory in North America, but at the end of the French and Indian Wars in 1763, England acquired all of the territory east of the Mississippi River, including east and west Florida. From 1776 to 1781, the States were governed by the Continental Congress. From 1781 to 1789, they were organized under the Articles of Confederation, during which period the individual States, formed from the former 13 British- American colonies; New York, New Jersey, New Hampshire, Massachusetts, Rhode Island, Connecticut, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina and Georgia, had the right to issue money.

While British and Spanish silver coins circulated freely in the American Colonies, several of the Colonies and later States did issue copper or silver coins. In addition, both merchant and political tokens, mainly in copper, were issued in several locations. The most popularly circulated, and now collected, of these Colonial and State issues are listed here.

The population of the colonies during this political phase of America's history (1781-1789) was about 3 million, most of whom lived on self-sufficient family farms. Fishing, lumbering and the production of grains for export were major economic endeavors. Rapid strides were also being made in industry and manufacturing by 1775, when the North American colonies were accounting for one- seventh of the world's production of raw iron.

Independence from Great Britain was attained with the American Revolution in 1776. The Constitution organized and governs the present United States. It was ratified on Nov. 21, 1788.

MACHIN'S MILL

KM# 13 • Copper Note: Crude, lightweight imitations of the British Halfpenny were struck at Machin's Mill in large quantities bearing the obverse legends: GEORGIUS II REX, GEORGIUS III REX, and GEORGIUS III REX, with the BRITANNIA reverse. There are many different mulings. Plain crosses in the shield of Britannia are noticeable on high grade pieces, unlike common British made imitations, which usually have outlined crosses in the shield. Some Machin's Mill varieties are very rare.

Date	AG3	G4	VG8	F12	VF20	XF40	MS60

PRIVATE GOLD

Private gold pieces (also referred to as “Territorial” and “Pioneer” gold) are those struck outside the U.S. Mint and not recognized as official issues by the federal government. The pieces so identified are of various shapes, denominations, and degrees of intrinsic value, and were locally required because of the remoteness of the early gold fields from a federal mint and/or an insufficient quantity of official coinage in frontier areas.

The legality of these privately issued pieces derives from the fact that federal law prior to 1864 prohibited a state from coining money, but did not specifically deny that right to an individual, providing that the privately issued coins did not closely resemble those of the United States.

In addition to coin-like gold pieces, the private minters of the gold rush days also issued gold in ingot and bar form. Ingots were intended for circulation and were cast in regular values and generally in large denominations. Bars represent a miner’s deposit after it had been assayed, refined, cast into convenient form (generally rectangular), and stamped with the appropriate weight, fineness, and value. Although occasionally cast in even values for the convenience of banks, bars were more often of odd denomination, and when circulated were rounded off to the nearest figure. Ingots and bars are omitted from this listing.

CALIFORNIA

Fractional and Small Size Gold Coinage

During the California gold rush a wide variety of U.S. and foreign coins were used for small change, but only limited quantities of these coins were available. Gold dust was in common use, although this offered the miner a relatively low value for his gold.

By 1852 California jewelers had begun to manufacture 25¢, 50¢ and \$1 gold pieces in round and octagonal shapes. Makers included M. Deriberpe, Antoine Louis Nouzillet, Isadore Routhier, Robert B. Gray, Pierre Frontier, Eugene Deviercy, Herman J. Brand, and Herman and Jacob Levison. Reuben N. Hershfield and Noah Mitchell made their coins in Leavenworth, Kansas and most of their production was seized in August 1871. Herman Kroll made California gold coins in New York City in the 1890s. Only two or three of these companies were in production at any one time. Many varieties bear the makers initials. Frontier and his partners made most of the large Liberty Head, Eagle reverse, and Washington Head design types. Most of the small Liberty Head types were made first by Nouzillet and later by Gray and then the Levison brothers and lastly by the California Jewelry Co. Coins initialed “G.G.” are apparently patterns made by Frontier and Deviercy for the New York based firm of Gaime, Guillemot & Co.

Most of the earlier coins were struck from gold alloys and had an intrinsic value of about 50-60 percent of face value. They were generally struck from partially hubbed dies and with reeded collars. A few issues were struck with a plain collar or a collar with reeding on only 7 of the 8 sides. Many issues are too poorly struck or too thin to have a clear and complete image of the collar. The later coins and some of the earlier coins were struck from laminated or plated gold planchets, or from gold plated silver planchets. Most of the last dates of issue are extremely thin and contain only token amounts of gold.

Circumstantial evidence exists that the coins issued through 1856 circulated as small change. The San Francisco mint was established in 1854, and by 1856 it had ramped up its production enough to satisfy the local need for small change. However, some evidence exists that these small gold coins may have continued to circulate on occasion through to 1871. After 1871, the gold content of the coins dramatically decreases and it is very unlikely that any of these last issues circulated.

Although the Private Coinages Act of 1864 outlawed all private coinage, this law was not enforced in California and production of small denominated gold continued through 1882. In the spring of 1883, Col. Henry Finnegass of the U.S. Secret Service halted production of the denominated private gold pieces. Non-denominated tokens (lacking DOLLARS, CENTS or the equivalent) were also made during this latter period, sometimes by the same manufacturing jeweler using the same obverse die and the same planchets as the small denomination gold coins. Production of these tokens continues to this day, with most issues made after the 1906 earthquake and fire being backdated to 1847-1865 and struck from brass or gold plated brass planchets.

Approximately 25,000 pieces of California small denomination gold coins are estimated to exist, in a total of over 500 varieties. A few varieties are undated, mostly gold rush era pieces; and a few of the issues are backdated, mostly those from the 1880’s. This listing groups varieties to-

gether in easily identified categories. The prices quoted are for the most common variety in each group. UNC prices reflect the median auction prices realized of MS60 to MS62 graded coins. BU prices reflect the median auction prices realized of MS63 to MS64 graded coins. Pre-1871 true MS-65 coins are rare and sell for substantial premiums over the prices on this list. Post-1871 coins are rarely found with wear and often have a cameo proof appearance. Auction prices realized are highly volatile and it is not uncommon to find recent records of sales at twice or half of the values shown here. Many of the rarity estimates published in the 1980s and earlier have proven to be too high, so caution is advised when paying a premium for a rare variety. In addition, many varieties that have a refined appearance command higher prices than equivalent grade but scarcer varieties that have a more crude appearance.

Several counterfeits of California Fractional Gold coins exist. Beware of 1854 and 1858 dated round 1/2 dollars, and 1871 dated round dollars that have designs that do not match any of the published varieties. Beware of reeded edge Kroll coins being sold as originals (see the listings below).

For further information consult "California Pioneer Fractional Gold" by W. Breen and R.J. Gillio and "The Brasher Bulletin" the official newsletter of The Society of Private and Pioneer Numismatists. UNITED STATES PRIVATE GOLD

PRIVATE ASSAY OFFICE ISSUES

CALIFORNIA

Norris, Grieg & Norris produced the first territorial gold coin struck in California, a \$5 piece struck in 1849 at Benicia City, though it bears the imprint of San Francisco. The coining facility was owned by Thomas H. Norris, Charles Greig, and Hiram A. Norris, members of a New York engineering firm. A unique 1850 variety of this coin has the name STOCKTON beneath the date, instead of SAN FRANCISCO.

Early in 1849, John Little Moffat, a New York assayer, established an assay office at San Francisco in association with Joseph R. Curtis, Philo H. Perry, and Samuel Ward. The first issues of the **Moffat & Co.** assay office consisted of rectangular \$16 ingots and assay bars of various and irregular denominations. In early August, the firm began striking \$5 and \$10 gold coins which resemble those of the U.S. Mint in design, but carry the legend S.M.V. (Standard Mint Value) CALIFORNIA GOLD on the reverse. Five-dollar pieces of the same design were also issued in 1850.

On Sept. 30, 1850, Congress directed the Secretary of the Treasury to establish an official Assay Office in California. Moffat & Co. obtained a contract to perform the duties of the U.S. Assay Office. **Augustus Humbert**, a New York watchcase maker, was appointed U.S. Assayer of Gold in California. Humbert stamped the first octagonal coin-ingots of the Provisional Government Mint on Jan. 31, 1851. The \$50 pieces were accepted at par with standard U.S. gold coins, but were not officially recognized as coins. Officially, they were designated as "ingots." Colloquially, they were known as slugs, quintuple eagles, or 5-eagle pieces.

The \$50 ingots failed to alleviate the need of California for gold coins. The banks regarded them as disadvantageous to their interests and utilized them only when compelled to do so by public need or convenience. Being of sound value, the ingots drove the overvalued \$5, \$10, and \$20 territorial gold coins from circulation, bringing about a return to the use of gold dust for everyday transactions. Eventually, the slugs became so great a nuisance that they were discounted 3 percent when accepted. This unexpected turn of events forced Moffat & Co. to resume the issuing of \$10 and \$20 gold coins in 1852. The \$10 piece was first issued with the Moffat & Co. imprint on Liberty's coronet, and later with the official imprint of Augustus Humbert on reverse. The \$20 piece was issued with the Humbert imprint.

On Feb. 14, 1852, John L. Moffat withdrew from Moffat & Co. to enter the diving bell business, and Moffat & Co. was reorganized as the **United States Assay Office of Gold**, composed of Joseph R. Curtis, Philo H. Perry, and Samuel Ward. The U.S. Assay Office of Gold issued gold coins in denominations of \$50 and \$10 in 1852, and \$20 and \$10 in 1853. With the exception of the \$50 slugs, they carry the imprint of the Assay Office on reverse. The .900 fine issues of this facility reflect an attempt to bring the issues of the U.S. Assay Office into conformity with the U.S. Mint standard.

The last territorial gold coins to bear the imprint of Moffat & Co. are \$20 pieces issued in 1853, after the retirement of John L. Moffat. These coins do not carry a mark of fineness, and generally assay below the U.S. Mint standard.

Templeton Reid, previously mentioned in connection with the private gold issues of Georgia, moved his coining equipment to California when gold was discovered there, and in 1849 issued \$10 and \$25 gold pieces. No specimens are available to present-day collectors. The only known \$10 piece is in the Smithsonian Collection. The only known specimen of the \$25 piece was stolen from the U.S. Mint Cabinet Collection in 1858 and was never recovered.

Little is known of the origin and location of the **Cincinnati Mining & Trading Co.** It is believed that the firm was organized in the East and was forced to abandon most of its equipment while enroute to California. A few \$5 and \$10 gold coins were struck in 1849. Base metal counterfeits exist.

The Massachusetts & California Co. was organized in Northampton, Mass., in May 1849 by Josiah Hayden, S. S. Wells, Miles G. Moies, and others. Coining equipment was taken to San Francisco where \$5 gold pieces were struck in 1849. The few pieces extant are heavily alloyed with copper.

Wright & Co., a brokerage firm located in Portsmouth Square, San Francisco, issued an undated \$10 gold piece in the autumn of 1849 under the name of **Miners' Bank**. Unlike most territorial gold pieces, the Miners' Bank eagle was alloyed with copper. The coinage proved to be unpopular because of its copper-induced color and low intrinsic value. The firm was dissolved on Jan. 14, 1850.

In 1849, Dr. **J. S. Ormsby** and Major William M. Ormsby struck gold coins of \$5 and \$10 de-

nominations at Sacramento under the name of Ormsby & Co. The coinage, which is identified by the initials J. S. O., is undated. Ormsby & Co. coinage was greatly over-valued, the eagle assaying at as little as \$9.37.

The **Pacific Co.** of San Francisco issued \$5 and \$10 gold coins in 1849. The clouded story of this coinage is based on conjecture. It is believed that the well-struck pattern coins of this type were struck in the East by the Pacific Co. that organized in Boston and set sail for California on Feb. 20, 1849, and that the crudely hand-struck pieces were made by the jewelry firm of Broderick and Kohler after the dies passed into their possession. In any event, the intrinsic value of the initial coinage exceeded face value, but by the end of 1849, when they passed out of favor, the coins had been debased so flagrantly that the eagles assayed for as little as \$7.86.

Dubosq & Co., a Philadelphia jewelry firm owned by Theodore Dubosq Sr. and Jr. and Henry Dubosq, took melting and coining equipment to San Francisco in 1849, and in 1850 issued \$5 and \$10 gold coins struck with dies allegedly made by U.S. Mint Engraver James B. Longacre. Dubosq & Co. coinage was immensely popular with the forty-niners because its intrinsic worth was in excess of face value.

The minting equipment of David C. Broderick and Frederick D. Kohler (see Pacific Co.) was acquired in May 1850 by San Francisco jewelers George C. Baldwin and Thomas S. Holman, who organized a private minting venture under the name of **Baldwin & Co.** The firm produced a \$5 piece of Liberty Head design and a \$10 piece with Horseman device in 1850. Liberty Head \$10 and \$20 pieces were coined in 1851. Baldwin & Co. produced the first \$20 piece issued in California.

Schultz & Co. of San Francisco, a brass foundry located in the rear of the Baldwin & Co. establishment, and operated by Judge G. W. Schultz and William T. Garratt, issued \$5 gold coins from early 1851 until April of that year. The inscription "SHULTS & CO." is a misspelling of SCHULTZ & CO.

Dunbar & Co. of San Francisco issued a \$5 gold piece in 1851, after Edward E. Dunbar, owner of the California Bank in San Francisco, purchased the coining equipment of the defunct Baldwin & Co.

The San Francisco-based firm of **Wass, Molitor & Co.** was owned by 2 Hungarian exiles, Count S. C. Wass and A. P. Molitor, who initially founded the firm as a gold smelting and assaying plant. In response to a plea from the commercial community for small gold coins, Wass, Molitor & Co. issued \$5 and \$10 gold coins in 1852. The \$5 piece was coined with small head and large head varieties, and the \$10 piece with small head, large head, and small close-date varieties. The firm produced a second issue of gold coins in 1855, in denominations of \$10, \$20, and \$50.

The U.S. Assay Office in California closed its doors on Dec. 14, 1853, to make way for the newly established San Francisco Branch Mint. The Mint, however, was unable to start immediate quantity production due to the lack of refining acids. During the interim, John G. Kellogg, a former employee of Moffat & Co., and John Glover Richter, a former assayer in the U.S. Assay Office, formed **Kellogg & Co.** for the purpose of supplying businessmen with urgently needed coinage. The firm produced \$20 coins dated 1854 and 1855, after which Augustus Humbert replaced Richter and the enterprise reorganized as Kellogg & Humbert Melters, Assayers & Coiners. Kellogg & Humbert endured until 1860, but issued coins, \$20 pieces, only in 1855.

COLORADO

The discovery of gold in Colorado Territory was accompanied by the inevitable need for coined money. Austin M. Clark, Milton E. Clark, and Emanuel H. Gruber, bankers of Leavenworth, Kansas, moved to Denver where they established a bank and issued \$2.50, \$5, \$10, and \$20 gold coins in 1860 and 1861. To protect the holder from loss by abrasion, Clark, Gruber & Co. made their coins slightly heavier than full value required. The 1860 issues carry the inscription PIKE'S PEAK GOLD on reverse. CLARK, GRUBER & CO. appears on the reverse of the 1861 issues, and PIKE'S PEAK on the coronet of Liberty. The government purchased the plant of Clark, Gruber & Co. in 1863 and operated it as a federal Assay Office until 1906.

In the summer of 1861, John Parsons, an assayer whose place of business was located in South Park at the Tarryall Mines, Colorado, issued undated gold coins in the denominations of \$2.50 and \$5. They, too, carry the inscription PIKE'S PEAK GOLD on reverse.

J. J. Conway & Co., bankers of Georgia Gulch, Colorado operated the Conway Mint for a short period in 1861. Undated gold coins in the denominations of \$2.50, \$5, and \$10 were issued. A variety of the \$5 coin does not carry the numeral 5 on reverse. The issues of the Conway Mint were highly regarded for their scrupulously maintained value.

GEORGIA

The first territorial gold pieces were struck in 1830 by **Templeton Reid**, a goldsmith and assayer who established a private mint at Gainesville, Georgia, at the time gold was being mined on a relatively large scale in Georgia and North Carolina. Reid's pieces were issued in denominations of \$2.50, \$5, and \$10. Except for an undated variety of the \$10 piece, all are dated 1830.

NORTH CAROLINA

The southern Appalachians were also the scene of a private gold minting operation conducted by Christopher Bechtler Sr., his son August, and nephew Christopher Jr. The Bechtlers, a family of German metallurgists, established a mint at Rutherfordton, North Carolina, which produced territorial gold coins for a longer period than any other private mint in American history. Christopher Bechtler Sr. ran the Bechtler mint from July 1831 until his death in 1842, after which the mint was taken over by his son August who ran it until 1852.

The Bechtler coinage includes but 3 denominations -- \$1, \$2.50, and \$5 - but they were issued in a wide variety of weights and sizes. The coinage is undated, except for 3 varieties of the \$5 piece which carry the inscription "Aug. 1, 1834" to indicate that they conform to the new weight standard adopted by the U.S. Treasury for official gold coins. Christopher Bechtler Sr. produced \$2.50 and \$5 gold coins for Georgia, and \$1, \$2.50, and \$5 coins for North Carolina. The dollar coins have the distinction of being the first gold coins of that denomination to be produced in the United States. While under the supervision of August Bechtler, the Bechtler mint issued \$1 and \$5 coins for North Carolina.

OREGON

The Oregon Exchange Co., a private mint located at Oregon City, Oregon Territory, issued \$5 and \$10 pieces of local gold in 1849. The initials K, M, T, A, W. R. C. (G on the \$5 piece), and S. on the obverse represent the eight founders of the Oregon Exchange Co.: William Kilborne, Theophilus Magruder, James Taylor, George Abernathy, William Willson, William Rector, John Campbell, and Noyes Smith. Campbell is erroneously represented by a G on the \$5 coin. For unknown reasons, the initials A and W are omitted from the \$10 piece. O.T. (Oregon Territory) is erroneously presented as T.O. on the \$5 coin.

UTAH

In 1849, the Mormons settled in the Great Salt Lake Valley of Utah and established the Deseret Mint in a small adobe building in Salt Lake City. Operating under the direct supervision of Brigham Young, the Deseret Mint issued \$2.50, \$5, \$10, and \$20 gold coins in 1849. Additional \$5 pieces were struck in 1850 and 1860, the latter in a temporary mint set up in Barlow's jewelry shop. The Mormon \$20 piece was the first of that denomination to be struck in the United States. The initials G.S.L.C.P.G. on Mormon coins denotes "Great Salt Lake City Pure Gold." It was later determined that the coinage was grossly deficient in value, mainly because no attempt was made to assay or refine the gold.

HAWAII

Hawaii, the 50th state, consists of eight main islands and numerous smaller islets of coral and volcanic origin. Situated in the central Pacific Ocean, 2,400 miles from San Francisco, the Hawaiian archipelago has an area of 6,450 square miles. Capital: Honolulu. The principal sources of income are in order: tourism, defense, and agriculture.

The Hawaiian Islands, originally populated by Polynesians from the Society Islands, were rediscovered by British navigator Capt. James Cook in 1778. He named them the Sandwich Islands. King Kamehameha I (the Great) united the islands under one kingdom, which endured until 1893, when Queen Lilioukalani was deposed and a provisional government established. This was followed in 1894 by a republic, which governed Hawaii until 1898, when the islands were ceded to the United States. Hawaii was organized as a territory in 1900 and attained statehood on Aug. 21, 1959.

Official coinage issued under the Kingdom of Hawaii was limited. The 1847 cent or Hapa Haneri coins were ordered by the Minister of Finance through an agent by the name of James Jackson Jarves. Jarves contracted the striking of 100,000 large copper coins from an unknown firm located somewhere in New England. The lack of acceptance by merchants limited the success of the 1847 coppers, which lead to a long gap before the next Hawaiian coinage issue in 1883.

The 1883 Kingdom coinage was contracted through Claus Spreckels, with circulation coins being struck at the San Francisco Mint. Very limited numbers of proof strikes were completed at the Philadelphia Mint, where Charles E. Barber designed these coins. Weights and measures on the 1883 Hawaiian coinage are the same as standard U.S. coins of the time period.

RULERS

Kamehameha I, 1795-1819
Kamehameha II, 1819-1824
Kamehameha III, 1825-1854
Kamehameha IV, 1854-1863
Kamehameha V, 1863-1872
Lunalilo, 1873-1874
Kalakaua, 1874-1891
Liliuokalani, 1891-1893
Provisional Government, 1893-1894
Republic, 1894-1898
Annexed to U.S., 1898-1900
Territory, 1900-1959

KM# 2 • Nickel Obv. Head left, date below **Rev:** Value within crowned belt **Obv. Legend:** KALAKAUA KING OF SANDWICH ISLANDS

Date	Mintage	F12	VF20	XF40	MS60	MS63
1881	200	6,500	9,500	14,000	22,000	27,000

Note: Original examples of this pattern were struck on thin nickel planchets, presumably in Paris and some have "MAILLECHORT" stamped on the edge. In the early 1900's, deceptive replicas of the issue were produced in Canada, on thick and thin nickel and aluminum planchets, and thin copper planchets (thick about 2.7 to 3.1mm; thin about 1.4 to 1.7mm). The original patterns have a small cross atop the crown, the replicas do not have the cross.

That leaves approximate net mintages of: KM#1 - 11,600; KM#3 - 250,000; KM#5 (regular date) - 242,600, (unknown) 40,000; KM#6 - 87,700; KM#7 - 46,300.

PHILIPPINES

United States Administration

1899-1946

The Philippines, an archipelago in the western Pacific 500 miles (805 km.) from the southeast coast of Asia, has an area of 115,830 square miles (300,000 sq. km.) and a current population of 64.9 million. Its capital city is Manila. From its acquisition in 1898 until 1992, the U.S. has had a military presence in the Philippines.

Migration to the Philippines began about 30,000 years ago when land bridges connected the islands with Borneo and Sumatra. Ferdinand Magellan claimed the islands for Spain in 1521. Miguel de Legazpi established the first permanent settlement at Cebu in April 1565. Manila was established in 1572. A British expedition captured Manila and occupied the Spanish colony in October 1762, but returned it to Spain by the treaty of Paris, 1763. Spain held the Philippines despite growing Filipino nationalism until 1898 when they were ceded to the United States at the end of the Spanish-American War.

A military government was established on the Islands until a civil administration was put in place in 1901. The Philippines became a self-governing commonwealth under the United States in 1935. In 1942, during the Second World War, the Philippines were occupied by the Japanese. U.S. forces and Filipinos both fought during 1944-45 to regain control of the Islands. On July 4, 1946, the Philippines became an independent Republic.

The coins listed here were issued under United States Administration of the Philippines. Coins dated 1903 to 1919 were struck at both the Philadelphia and San Francisco Mints, while coins dated 1920 and after were produced at the Manila Mint in the Philippines. With Japanese forces advancing in 1942, much of the Philippine Treasury's silver coinage was returned to the United States for safekeeping. Coinage that remained at the Mint in Manila was crated and dumped in the bay before the Japanese arrived. During the struggle to regain control of the Philippines near the end of WWII, coins dated 1944 to 1945 were struck by the U.S. Mint at Denver, San Francisco and Philadelphia.

Symbolically the first series of U.S. Philippines coins with its American eagle perched on a stars and stripes shield places emphasis on U.S. dominance of the islands. The second series, struck under Commonwealth authority began the move towards independence by placing a new Commonwealth of the Philippines shield on the reverses of all denominations.

MINT MARKS

D - Denver, 1944-1945

S - San Francisco, 1903-1947

M - Manila, 1920-1941

PUERTO RICO

The Commonwealth of Puerto Rico, the eastern-most island of the Greater Antilles in the West Indies, has an area of approximately 3,435 square miles (9,104 sq. km.), with sandy beaches on the coastal areas and much mountainous territory inland. Puerto Rico's capital, San Juan, affords the island one of the best natural harbors in the Caribbean and has become an important stop on the Mona Passage shipping route to the Panama Canal.

Columbus discovered Puerto Rico (Rich Port) and took possession for Spain on Nov. 19, 1493 - the only time Columbus set foot on the soil of what is now a possession of the United States. The first settlement, Caparra, was established by Ponce de Leon in 1508. The early years of the colony were not promising. Considerable gold was found, but the supply was soon exhausted. Efforts to enslave the Indians caused violent reprisals. Hurricanes destroyed crops and homes. French, Dutch, and English freebooters burned the towns. Puerto Rico remained a Spanish possession until 1898, when it was ceded to the United States following the Spanish-American War.

When the Spanish first colonized Puerto Rico, native populations were operating on a barter system of exchange. Spanish coinage was introduced and eventually accepted for exchange. As mints developed in the Americas, their coins, first cobs and later milled coins, were also circulated in Puerto Rico. This mix of Spanish and Spanish Colonial coins served Puerto Rico for several centuries, though copper and bronze coins were easier to keep in circulation, while silver and gold tended to be taken away by traders. Paper money was also used in Puerto Rico from the mid 18th century on, though counterfeiting led to the devaluation of many of these banknotes. Economic conditions were in great disarray by the early part of the 19th century. All sorts of currency and coinage were in circulation with counterfeits diluting the money supply. Cob coins, Spanish coins, cut and countermarked coins of the various West Indies, along with several issues of bank notes were all in circulation, leading to confusion and lack of fluid acceptance.

In 1895 the first coinage specifically struck for the Island of Puerto Rico was produced by Spain. Additional denominations were struck in 1896 completing Puerto Rico's only official coinage series. These coins brought some semblance of order to the daily economic transactions on the island and remained in use until Puerto Rico was taken over by the United States in 1898. Redemption of all peso denominated coins took place from July 1900 until March 1901 at the rate of 60 U.S. cents to the peso.

Glossary

GLOSSARY

Adjustment marks: Marks made by use of a file to correct the weight of overweight coinage planchets prior to striking. Adjusting the weight of planchets was a common practice at the first U.S. Mint in Philadelphia and was often carried out by women hired to weigh planchets and do any necessary filing of the metal.

Altered coin: A coin that has been changed after it left the mint. Such changes are often to the date or mintmark of a common coin in an attempt to increase its value by passing to an unsuspecting buyer as a rare date or mint.

Alloy: A metal or mixture of metals added to the primary metal in the coinage composition, often as a means of facilitating hardness during striking. For example, most U.S. silver coins contain an alloy of 10 percent copper.

Anneal: To heat in order to soften. In the minting process planchets are annealed prior to striking.

Authentication: The act of determining whether a coin, medal, token or other related item is a genuine product of the issuing authority.

Bag marks: Scrapes and impairments to a coin's surface obtained after minting by contact with other coins. The term originates from the storage of coins in bags, but such marks can occur as coins leave the presses and enter hoppers. A larger coin is more susceptible to marks, which affect its grade and, therefore, its value.

Base metal: A metal with low intrinsic value.

Beading: A form of design around the edge of a coin. Beading once served a functional purpose of deterring clipping or shaving parts of the metal by those looking to make a profit and then return the debased coin to circulation.

Blank: Often used in reference to the coinage planchet or disc of metal from which the actual coin is struck. Planchets or blanks are punched out of a sheet of metal by what is known as a blanking press.

Business strike: A coin produced for circulation.

Cast copy: A copy of a coin or medal made by a casting process in which molds are used to produce the finished product. Casting imparts a different surface texture to the finished product than striking and often leaves traces of a seam where the molds came together.

Center dot: A raised dot at the center of a coin caused by use of a compass to aid the engraver in the circular positioning of die devices, such as stars, letters, and dates. Center dots are prevalent on early U.S. coinage.

- Chop mark:** A mark used by Oriental merchants as a means of guaranteeing the silver content of coins paid out. The merchants' chop marks, or stamped insignia, often obliterated the original design of the host coin. U.S. Trade dollars, struck from 1873 through 1878 and intended for use in trade with China, are sometimes found bearing multiple marks.
- Clash marks:** Marks impressed in the coinage dies when they come together without a planchet between them. Such marks will affect coins struck subsequently by causing portions of the obverse design to appear in raised form on the reverse, and vice versa.
- Clipping:** The practice of shaving or cutting small pieces of metal from a coin in circulation. Clipping was prevalent in Colonial times as a means of surreptitiously extracting precious metal from a coin before placing it back into circulation. The introduction of beading and a raised border helped to alleviate the problem.
- Coin alignment:** U.S. coins are normally struck with an alignment by which, when a coin is held by the top and bottom edge and rotated from side-to-side, the reverse will appear upside down.
- Collar:** A ring-shaped die between which the obverse and reverse coinage dies are held during striking. The collar contains the outward flow during striking and can be used to produce edge reeding.
- Commemorative:** A coin issued to honor a special event or person. United States commemorative coins have historically been produced for sale to collectors and not placed in circulation, though the 50-states quarters are circulating commemoratives.
- Copy:** A replica of an original issue. Copies often vary in quality and metallic composition from the original. Since passage of the Hobby Protection Act (Public Law 93-167) of Nov. 29, 1973, it has been illegal to produce or import copies of coins or other numismatic items that are not clearly and permanently marked with the word "Copy."
- Counterfeit:** A coin or medal or other numismatic item made fraudulently, either for entry into circulation or sale to collectors.
- Denticles:** The toothlike pattern found around a coin's obverse or reverse border.
- Die:** A cylindrical piece of metal containing an incuse image that imparts a raised image when stamped into a planchet.
- Die crack:** A crack that develops in a coinage die after extensive usage, or if the die is defective or is used to strike harder metals. Die cracks, which often run through border lettering, appear as raised lines on the finished coin.
- Device:** The principal design element.

Double eagle: Name adopted by the Act of March 3, 1849, for the gold coin valued at 20 units or \$20.

Eagle: Name adopted by the Coinage Act of 1792 for a gold coin valued at 10 units or \$10. Also a name used to refer to gold, silver, and platinum coins of the American Eagle bullion coinage program begun in 1986.

Edge: The cylindrical surface of a coin between the two sides. The edge can be plain, reeded, ornamented, or lettered.

Electrotype: A copy of a coin, medal, or token made by electroplating.

Exergue: The lower segment of a coin, below the main design, generally separated by a line and often containing the date, designer initials, and mintmark.

Face value: The nominal legal-tender value assigned to a given coin by the governing authority.

Fasces: A Roman symbol of authority consisting of a bound bundle of rods and an axe.

Field: The flat area of a coin's obverse or reverse, devoid of devices or inscriptions.

Galvano: A reproduction of a proposed design from an artist's original model produced in plaster or other substance and then electroplated with metal. The galvano is then used in a reducing lathe to make a die or hub.

Glory: A heraldic term for stars, rays or other devices placed as if in the sky or luminous.

Grading: The largely subjective practice of providing a numerical or adjectival ranking of the condition of a coin, token, or medal. The grade is often a major determinant of value.

Gresham's law: The name for the observation made by Sir Thomas Gresham, 16th century English financier, that when two coins with the same face value but different intrinsic values are in circulation at the same time, the one with the lesser intrinsic value will remain in circulation while the other is hoarded.

Half eagle: Name adopted by the Coinage Act of 1792 for a gold coin valued at five units or \$5.

Hub: A piece of die steel showing the coinage devices in relief. The hub is used to produce a die that, in contrast, has the relief details incuse. The die is then used to produce the final coin, which looks much the same as the hub. Hubs may be reused to make new dies.

Legend: A coin's principal lettering, generally shown along its outer perimeter.

Lettered edge: Incuse or raised lettering on a coin's edge.

Matte proof: A proof coin on which the surface is granular or dull. On U.S. coins this type of surface was used on proofs of the early 20th century. The process has since been abandoned.

Magician's coin: A term sometimes used to describe a coin with two heads or two tails. Such a coin is considered impossible in normal production due to physical differences in obverse and reverse die mountings, though as of 2001 two have been certified as genuine by professional coin authenticators. The vast majority are products made outside the Mint as novelty pieces.

Medal: Made to commemorate an event or person. Medals differ from coins in that a medal is not legal tender and, in general, is not produced with the intent of circulating as money.

Medal alignment: Medals are generally struck with the coinage dies facing the same direction during striking. When held by the top and bottom edge and rotated from side-to-side, a piece struck in this manner will show both the obverse and reverse right side up.

Mintage: The total number of coins struck during a given time frame, generally one year.

Mintmark: A letter or other marking on a coin's surface to identify the mint at which the coin was struck.

Mule: The combination of two coinage dies not intended for use together.

Numismatics: The science, study or collecting of coins, tokens, medals, paper money, and related items.

Obverse: The front or "heads" side of a coin, medal, or token.

Overdate: Variety produced when one or more digits of the date are re-engraved over an old date on a die at the Mint, generally to save on dies or correct an error. Portions of the old date can still be seen under the new one.

Overmintmark: Variety created at the Mint when a different mintmark is punched over an already existing mintmark, generally done to make a coinage die already punched for one mint usable at another. Portions of the old mintmark can still be seen under the new one.

Overstrike: A coin, token or medal struck over another coin, token, or medal.

Pattern: A trial strike of a proposed coin design, issued by the Mint or authorized agent of a governing authority. Patterns can be in a variety of metals, thicknesses, and sizes.

Phrygian cap: A close-fitting, egg-shell-shaped hat placed on the head of a freed slave when Rome was in its ascendancy. Hung from a pole, it was a popular symbol of freedom during the French Revolution and in 18th century United States.

Planchet: A disc of metal or other material on which the image of the dies are impressed, resulting in a finished coin. Also sometimes called a blank.

Proof: A coin struck twice or more from specially polished dies and polished planchets. Modern proofs are prepared with a mirror finish. Early 20th century proofs were prepared with a matte surface.

Prooflike: A prooflike coin exhibits some of the characteristics of a proof despite having been struck by regular production processes. Many Morgan dollars are found with prooflike surfaces. The field will have a mirror background similar to that of a proof, and design details are frosted like some proofs.

Quarter eagle: Name adopted by the Coinage Act of 1792 for a gold coin valued at 2.5 units or \$2.50.

Reeding: Serrated (toothlike) ornamentation applied to the coin's edge during striking.

Relief: The portion of a design raised above the surface of a coin, medal, or token.

Restrike: A coin, medal or token produced from original dies at a later date, often with the purpose of sale to collectors.

Reverse: The backside or "tails" side of a coin, medal or token, opposite from the principal figure of the design or obverse.

Rim: The raised area bordering the edge and surrounding the field.

Series: The complete group of coins of the same denomination and design and representing all issuing mints.

Token: A privately issued piece, generally in metal, with a represented value in trade or offer of service. Tokens are also produced for advertising purposes.

Type coin: A coin from a given series representing the basic design. A type coin is collected as an example of a particular design rather than for its date and mintmark.

Variety: Any coin noticeably different in dies from another of the same design, date and mint. Overdate and overmintmarks are examples of varieties.

Wire edge: Created when coinage metal flows between the coinage die and collar, producing a thin flange of coin metal at the outside edge or edges of a coin.

U.S. Coins Made Easy

Easy to use and easy to understand, the **2018 U.S. Coin Digest** is the most comprehensive color guide to United States coin issues on the market. Providing professionally vetted values, complete coin listings, detailed coin images and unique “lay-flat” book design for no sweat searches, **U.S. Coin Digest** is a superb reference for both the beginner and expert collector.

Inside you will find:

- All U.S. coin issues
- Real-market coin values
- 2,000 color images
- 11 grades of coin condition
- Bullion coins
- Private Gold coins
- Mint and Proof sets
- Commemoratives
- Coins of Hawaii, Philippines and Puerto Rico
- Colonial and Early Coinage
- Errors and varieties

Whether sorting through a jar of coins or appraising a massive collection, **U.S. Coin Digest** is the ideal reference for the job.
